**Cardiac Disease in the Elderly** M. Preiss, M. Grapow, P. Buser, H.-R. Zerkowski, 2012-12-06 CARLO CONTI You are today confronting sensitive questions on the subject of Cardiac surgery and heart diseases in old age and I congratulate you on this It is a brave and important step to discuss this multifaceted question which demands an answer and an explanation from many perspectives From a medical perspective there is the question of the medical feasibility and durability of treatment From an economic angle we ask ourselves whether we can pay for everything that is medically feasible From the patient's perspective there is the legitimate desire and the justified need not to leave anything untried that might serve to sustain or improve the quality of life The ethical perspective is what is feasible really desirable Should everything be done simply because it can be done Is it ethically acceptable to set an age limit on an operation that in all probability will produce an improvement in the quality of life And if so where does this limit lie Below it surgery is worthwhile but above it is not No one in all seriousness and with a clean conscience will want to draw this line randomly or arbitrarily That appears to us quite rightly morally unacceptable The doctor's perspective they are obliged by the Hippocratic oath in principle to carry out all the treatments that are indicated and comply with the rules of the art of medicine

**Cardiovascular Disease and Health in the Older Patient** David J. Stott, Gordon D. O. Lowe, 2012-11-08 As improvements in living conditions and advances in modern medicine lead to increased life expectancy and the number of older adults world wide continues to grow so the number of older individuals with cardiac and cerebrovascular disease is rising Over eighty per cent of all cardiovascular disease related deaths now occur in patients aged sixty five or older The high prevalence of comorbidities frailty and cognitive decline amongst older patients requires that a holistic approach to the management of cardiovascular disease is required Written and edited by leading experts in the field Cardiovascular diseases and health in the older patient provides scholarly evidence and data which explain why treating an older patient with cardiovascular disease is often different from treating a young or middle aged patient with the same disease The chapters have been updated and expanded from the cardiovascular section of the renowned Pathy's Principles and Practice of Geriatric Medicine edited by Alan J Sinclair John E Morley and Bruno Vellas The revised chapters contain updated evidence and references to recent clinical practice guidelines in Europe and North America this book provides complete authoritative information on this major cause of death poor health and disability in old age Covering the epidemiology pathophysiology and management of cardiovascular disease in the older patient the book is an excellent reference at all clinical and pre clinical levels and will appeal particularly to geriatricians cardiologists and GPs as well as cardiac specialist nurses and practice nurses With a Foreword by Stuart M Cobbe

Tresch and Aronow's Cardiovascular Disease in the Elderly, Fifth Edition Wilbert S. Aronow, Jerome L. Fleg, Michael W. Rich, 2013-09-04 With advances and

breakthroughs in modern medicine that are allowing people to live longer the number of older adults will continue to grow exponentially over the next several decades Cardiologists geriatricians and other clinicians caring for the elderly will require at the very least a basic understanding of cardiovascular disorders that commonly affect the older patient In the fifth edition of Tresch and Aronow's Cardiovascular Disease in the Elderly each chapter has been thoroughly updated to provide a comprehensive yet accessible overview of the epidemiology pathophysiology evaluation and treatment of cardiovascular disorders in older adults The book spans topics such as aging changes in the cardiovascular system risk factors and epidemiology for coronary artery disease valvular heart disease cardiomyopathies and heart failure arrhythmias cerebrovascular disease and other miscellaneous subjects The contributors supply evidence based recommendations with strong emphasis on new research findings New to the Fifth Edition Numerous chapters comprehensively revised with new authors and or co authors Summaries at the beginning of each chapter to facilitate easy reading Discussion of the use of new antithrombotic agents in older adults Important references in the bibliography highlighted for simplified access With contributions from recognized experts in the field this classic work continues to serve as the premier source on the evaluation and management of cardiovascular disorders in older adults

**Cardiovascular Disease in the Elderly** Franz H. Messerli, 2013-12-01 By the time a man gets well into his seventies his continued existence is a mere miracle Robert Louis Stevenson It hardly seems possible that a second edition is needed after the first has been in print for only three years However when I reflect on what has happened in geriatric cardiology during that short period it becomes obvious why First cardiologists all over the globe have begun to realize that geriatric cardiology has evolved into a science and a clinical discipline of its own Although some of us may consider such subspecialization unfortunate it has become clear that a variety of cardiac disorders present with different symptoms and signs require a different diagnostic and therapeutic approach and have a different prognostic outlook in the elderly when compared to middle aged patients Since the aging segment of the population has increased dramatically over the past few decades and continues to do so specific age related disorders are more frequently encountered by the practicing physician be it by the general practitioner by the internist or by a cardiologist Cardiovascular Disease in the Elderly provides an up to date guide to help the physician deal with these problems leading the way in what turns out to be an increasingly complex area Second I have been heartened by the warm reception of the first edition and by the excellent reviews that it got in the most prestigious medical journals

pathophysiology and treatment of cardiovascular disorders in older patients *Preventive Cardiology in the Elderly* Michael W. Rich, George A. Mensah, 2009

**Principles and Practice of Geriatric Surgery** Ronnie Ann Rosenthal, Michael E. Zenilman, Mark R. Katlic, 2011-07-12 In the preface to this impressive and well produced book the editors state that their aim is not to describe a new surgical specialty since most surgeons will soon need to be geriatric surgeons but to assemble a comprehensive account that will allow all providers of healthcare to the elderly to understand the issues involved in choosing surgery as a treatment option for their patients This is a useful book that deserves to do well I hope that the editors and their publisher will have the stamina to make this the first of several editions as it is clear that updated information about surgery in the elderly will be required to keep pace with this important field NEJM Book Review [Principles and Practice of Geriatric Surgery](#) Ronnie A. Rosenthal, 2001 Principles and Practice of Geriatric Surgery presents the fundamentals of surgical care for the fastest growing segment of the US population providing a vital integration of operative strategies with the physiological changes of aging Among the topics covered are the endocrine system otolaryngology respiratory system cardiovascular system GI system hepatobiliary system urogenital system soft tissue and musculoskeletal system neurosurgery and transplantation

*Epidemiology and Prevention of Cardiovascular Diseases in Elderly People* World Health Organization, WHO Study Group on Epidemiology and Prevention of Cardiovascular Diseases in the Elderly, 1995 A state of the art review of what is currently known about the epidemiology of cardiovascular diseases in elderly people and the possibilities for prevention Noting that little attention has been given to the problem of cardiovascular diseases in this age group the report aims to highlight opportunities for prevention while also underscoring the medical social and economic implications of increased longevity and the corresponding increase in the prevalence of cardiovascular disease Both population based approaches to prevention and strategies for reaching high risk individuals are considered Areas where knowledge is weak and research is urgently needed are also indicated The report has six main sections The first on demographic trends summarizes key characteristics of the elderly population in various parts of the world discusses the current and projected size of the elderly population and describes changes in life expectancy over the past four years A profile of cardiovascular diseases in the elderly is provided in the second section which includes information on the global burden of cardiovascular diseases trends in mortality rates and possible explanations the most important cardiovascular diseases affecting the elderly and eight principal risk factors The third and most extensive section reviews health policy options for the prevention of cardiovascular diseases in elderly people and discusses their relative cost effectiveness Emphasis is placed on lifestyle approaches and on the medical management of risk factors The remaining sections discuss opportunities for rehabilitation and establish guidelines for the development of health policies aimed at the prevention of cardiovascular disease in the elderly

*Cardiovascular Disease in Older People* Fran E. Kaiser, John E. Morley, Rodney M. Coe, 1997

*Cardiac Management in the Frail Elderly Patient and the Oldest Old* Andrea Ungar, Niccolò

Marchionni,2017-03-14 This book focuses specifically on the management of cardiovascular disease in elderly patients with particular frailties and in the oldest old It is clearly explained how treatment in these patients differs from that in patients in their seventies who respond well to therapies and do not present frailties or organ failures Although not young the latter patients can be treated almost like any other patient according to established guidelines In contrast the frail compromised elderly and the oldest old require specific measures that target their needs including with respect to underlying renal conditions The book considers all those pathologies that have a high prevalence in the general population explaining advanced treatment concepts and all aspects of assessment Key clinical points are highlighted and the text is supplemented with numerous informative figures and tables The authors are respected experts for the most part geriatric physicians and the book is especially addressed to cardiologists who may lack the described targeted information and treatment tools
