

Building Surveyor (typical salary £28,000 to £70,000)

As a building surveyor, you'll complete detailed reports, known as building surveys, which show you'll identify defects and advise on repair, maintenance and restoration options. Projects can include existing buildings, buildings of architectural or historic importance and the development of new ones. You may implement preventative measures to keep buildings in good condition and look for ways to make buildings sustainable.

Responsibilities

As a building surveyor, you'll need to ensure projects are completed on budget and to schedule, advise clients on schemes and projects and determine requirements, oversee scheme designs with costings, programme for completion of projects and specification of works, organise documents for tender and advise on appointing contractors, designers and procurement routes, determine the condition of existing buildings, identify and analyse defects, including proposals for repair.

Gerardi, 1987 [The Underrepresentation of Women in Science: International and Cross-Disciplinary Evidence and Debate](#)

Stephen J. Ceci, Wendy M. Williams, Shulamit Kahn, 2018-04-20 There is no shortage of articles and books exploring women's underrepresentation in science. Everyone is interested: academics, politicians, parents, high school girls and boys, women in search of college majors, administrators working to accommodate women's educational interests; the list goes on. But one thing often missing is an evidence-based examination of the problem, uninfluenced by personal opinions, accounts of lived experiences, anecdotes, and the always encroaching inputs of popular culture. This is why this special issue of *Frontiers in Psychology* can make a difference. In it, a diverse group of authors and researchers with even more diverse viewpoints find themselves united by their empirical, objective approaches to understanding women's underrepresentation in science today. The questions considered within this special issue span academic disciplines, methods, levels of analysis, and nature of analysis. What these articles share is their scholarly, evidence-based approach to understanding a key issue of our time. *Career Preference Theory* Karen M. Dettinger, 1999 **Journal for Research in Mathematics Education**, 2011 **Leaks in the Pipeline to Math, Science, and Technology Careers** Janis E. Jacobs, Sandra D. Simpkins, 2005 Around the world, the need for highly trained scientists and technicians remains high, especially for positions that require employees to have a college degree and skills in math, science, and technology. The pipeline into these jobs begins in high school, but many leaks occur before young people reach the highly educated workforce needed to sustain leadership in science and technology. Students drop out of the educational pipeline in science and technology at alarming rates at each educational transition, beginning in high school, but women and ethnic minority youth drop out at a faster rate. Women and minorities are consistently underrepresented in science and engineering courses and majors. They account for a small portion of the workforce in high-paying and more innovative jobs that require advanced degrees. This schism between the skills necessary in our ever-changing economy and the skill set that most young adults acquire is troubling. It leads us to ask the question that forms the basis for this issue: Why are adolescents and young adults, particularly women and minorities, opting out of the math, science, and technology pipeline? The volume addresses gender and ethnic differences in the math, science, and technology pipeline from multiple approaches, including theoretical perspectives, a review of the work in this field, presentation of findings from four longitudinal studies, and a discussion of research implications given the current educational and economic climate. This is the 110th issue of the Jossey-Bass quarterly report series *New Directions for Child and Adolescent Development*.
