Evolution of Human Behavior Warren G. Kinzey, 1987-01-01 This book represents an important meeting ground in the primatology field by exploring the various primate models that have been used in the reconstruction of early human behavior While some models are based on the proposition that a key behavioral feature such as hunting eating of seeds or monogamous mating led to the evolutionary separation of apes and humans other models suggest that one primate species such as the baboon or chimpanzee best exemplifies the behavior of our early ancestors Several contributors to the

book take the position that no single primate is a good model and contend instead that a model must be eclectic One of the more innovative essays suggests that ancestral behavioral states can in fact be derived by comparing the behavior of all living hominid ape and human species Additionally several other contributors analyze and discuss the concept of model making noting deficiencies in earlier models while offering suggestions for future development Although it is true that a powerful conceptual model for reconstructing hominid behavior does not yet exist *The Evolution of Human Behavior Primate Models* suggests ways one may be constructed based on behavioral ecology and evolutionary theory

The Real Planet of the Apes David R. Begun, 2018-11-13

The astonishing new story of human origins Was Darwin wrong when he traced our origins to Africa *The Real Planet of the Apes* makes the explosive claim that it was in Europe not Africa where apes evolved the most important hallmarks of our human lineage In this compelling and accessible book David Begun one of the world's leading paleoanthropologists transports readers to an epoch in the remote past when the Earth was home to many migratory populations of ape species Begun draws on the latest astonishing discoveries in the fossil record as well as his own experiences conducting field expeditions to offer a sweeping evolutionary history of great apes and humans He tells the story of how one of the earliest members of our evolutionary group evolved from lemur like monkeys in the primeval forests of Africa Begun then vividly

describes how over the next ten million years these hominoids expanded into Europe and Asia and evolved climbing and hanging adaptations longer maturation times and larger brains As the climate deteriorated in Europe these apes either died out or migrated south reinvading the African continent and giving rise to the lineages of African great apes and ultimately humans Presenting startling new insights *The Real Planet of the Apes* fundamentally alters our understanding of human origins
