M. Anstis,1998 Motion perception lies at the heart of the scientific study of vision The motion aftereffect MAE is the appearance of directional movement in a stationary object or scene after the viewer has been exposed to visual motion in the opposite direction For example after one has looked at a waterfall for a period of time the scene beside the waterfall may appear to move upward when one's gaze is transferred to it Although the phenomenon seems simple research has revealed complexities in the underlying mechanisms and offered general lessons about how the brain processes visual information In the 1990s alone more than 200 papers have been published on MAE largely inspired by improved techniques for examining brain electrophysiology and by emerging new theories of motion perception      Sensory Experience, Adaptation, and Perception Lothar Spillman,Bill R. Wooten,2013-05-13 Published in 1983 *Sensory Experience Adaptation and Perception* is a valuable contribution to the field of Cognitive Psychology      **The Oxford Compendium of Visual Illusions** Arthur Gilman Shapiro,Dejan Todorović,2017 Visual illusions are compelling phenomena that draw attention to the brain's capacity to construct our perceptual world The Compendium is a collection of over 100 chapters on visual illusions written by the illusion creators or by vision scientists who have investigated mechanisms underlying the phenomena      **Differences in Visual Perception** Jules Davidoff,2012-12-02 *Differences in Visual Perception The Individual Eye* examines the differences in visual perception that can occur in various circumstances when observers perceive the same event More specifically the book considers the distinction between what happens when a person looks at the world directly and when he sits with his eyes closed and thinks This book is organized into five chapters and begins with an overview of differences in perception that are in operation for only a short time emphasizing the distinction between short and long term effects and at what point short becomes long The reader is then introduced to the development of perception touching on topics such as the nature nurture issue visual acuity and visual discrimination color vision space perception and attentional processes The ambiguity of the stimulus is also discussed along with the perceptual theory known as transactionalism how the visual world is interpreted and the nature of the input to the visual system The theme that runs throughout this work is the fact that the same external input does not necessarily bring about in all of us the same perception This book will prove useful to students as well as established researchers interested in visual perception and cognition      *The American Journal of Psychology* Granville Stanley Hall,Edward Bradford Titchener,Karl M.
