After Thought The Computer Challenge To Human Intelligence:

    After Thought James Bailey,1997-05-16 Through the first fifty years of the computer revolution scientists have been trying to program electronic circuits to process information the same way humans do Doing so has reassured us all that underlying every new computer capability no matter how miraculously fast or complex are human thought processes and logic But cutting edge computer scientists are coming to see that electronic circuits really are alien that the difference between the human mind and computer capability is not merely one of degree how fast but of kind how The author suggests that computers think best when their thoughts are allowed to emerge from the interplay of millions of tiny operations all interacting with each other in parallel Why then if computers bring to the table such very different strengths and weaknesses are we still trying to program them to think like humans A work that ranges widely over the history of ideas from Galileo to Newton to Darwin yet is just as comfortable in the cutting edge world of parallel processing that is at this very moment yielding a new form of intelligence After Thought describes why the real computer age is just beginning   **The Economics of Attention** Richard A. Lanham,2006-04-21 If economics is about the allocation of resources then what is the most precious resource in our new information economy Certainly not information for we are drowning in it No what we are short of is the attention to make sense of that information With all the verve and erudition that have established his earlier books as classics Richard A Lanham here traces our epochal move from an economy of things and objects to an economy of attention According to Lanham the central commodity in our new age of information is not stuff but style for style is what competes for our attention amidst the din and deluge of new media In such a world intellectual property will become more central to the economy than real property while the arts and letters will grow to be more crucial than engineering the physical sciences and indeed economics as conventionally practiced For Lanham the arts and letters are the disciplines that study how human attention is allocated and how cultural capital is created and traded In an economy of attention style and substance change places The new attention economy therefore will anoint a new set of moguls in the business world not the CEOs or fund managers of yesteryear but new masters of attention with a grounding in the humanities and liberal arts Lanham s The Electronic Word was one of the earliest and most influential books on new electronic culture The Economics of Attention builds on the best insights of that seminal book to map the new frontier that information technologies have created   **After Thought** James Bailey,1996-06-27 In the tradition of Godel Escher Bach this profound book reveals the potential of computers to reshape how we think Bailey asserts that computers are about to take a giant scientific step forward enabling us to finally understand such complex biological and social phenomena as weather patterns economies and more
