Carbon Carbon Composites:

Carbon-Carbon Materials and Composites John D. Buckley, Dan D. Edie, 2012-12-02 The major areas of carbon carbon materials and composites are described in this comprehensive volume It presents data and technology on the materials and structures developed for the production of carbon carbon materials and composites The text is composed of papers by 13 noted authors in their areas of expertise relating to the processes and production of these material systems and structures The subject matter in the book is arranged to lead the reader through materials processing fabrication structural analysis and applications of typical carbon carbon products The information provided includes fiber technology matrix material design of composite structures manufacturing techniques engineering mechanics protective coatings and structural applications using carbon carbon materials and composites

Carbon-Carbon Composites Gary Savage, 1993 Carbon is a material around which a whole branch of science has developed This book introduces carbon carbon materials with respect to their relationship to other carbon materials Each of the major production methods is covered and a chapter is devoted to the susceptibility to oxidation

Essentials of Carbon-carbon Composites Colin R. Thomas, Royal Society of Chemistry (Great Britain), 1993 Aimed at graduate and post graduate level this book aims to give a balanced and up to date picture of UK interests in carbon carbon composite materials

Carbon-Carbon Composites E. Savage, 2012-12-06 Carbon fibre reinforced carbon composites form a very specialized group of materials They may be considered as a development of the family of carbon fibre reinforced polymer composites which are becoming ever more prevalent in modern engineering Since the early 1960s a large number of so called advanced materials have appeared on the scene Carbon carbon is arguably the most successful of all these products finding many and varied applications In the field of Formula 1 motor racing for example the present levels of performance simply could not be achieved without the use of carbon carbon brakes and clutches Despite the materials obvious assets they have not and will not reach their full potential until their inherent problems of excessive production costs and oxidation resistance have been addressed properly In this respect the carbon carbon story of much potential but only limited success serves as a lesson to all those involved in materials research development and application In writing this book I have tried to set up a logical progression of what the materials are how they are made what their assets and deficiencies are what they are used for and to what extent they are commercially exploited Each specialized chapter may be considered in isolation or as part of a sequence whereas the final chapter provides a summary of the principal concepts as well as a basic review of the economic situation past present and hopefully future

Carbon Fiber Composites Deborah D.L. Chung, 1994-09-23 Provides introductory information on carbon fiber composites including polymer matrix metal matrix carbon matrix ceramic matrix and hybrid composites Places emphasis on materials rather than mechanics

Carbon-carbon Composites (CCC) Donald L. Schmidt, 1996 Carbon carbon composite CCC materials are typically composed of a fibrous carbon reinforcement a carbonaceous or graphitic matrix and sometimes other fillers or coatings to

impart specialized properties CCC materials have an outstanding balance of properties which have led to many important uses in the aerospace defense braking industrial and other fields This report provides a historical perspective of CCC materials including a the most important developmental events b the present technology base and c present and future uses The international materials community has assisted in compiling over 1400 historical events Many of these events are listed in the report Hopefully they will assist in a recognizing major CCC events of the past b stimulate new approaches and solutions for current problems and issues and c provide a basis for forecasting future developments
