Carcinogenesis as a Biological Problem Isaac Berenblum,1974 **(Volume 34) Carcinogenesis as a Biological Problem** I. Berenblum,1974 **Biology of Carcinogenesis** M.J. Waring,B.A. Ponder,2012-12-06 There is no shortage of books on cancer Why publish another Simply because the subject is important possibly the most important challenge facing medicine today and consequently the focus of one of the fastest growing areas of fundamental biological research The quest to understand and control cancer is so absorbing that from time to time we really need to pause for a moment and try to take stock of the situation Given the sheer breadth of cancer related research that is not an easy task This book together with its planned successors in the series Cancer Biology and Medicine represents our attempt to draw back from the bench or the bedside for a moment and take a slightly longer look at what we are doing what we are trying to do and where we stand It is impossible to be comprehensive or even representative of more than a fraction of relevant knowledge but that is no excuse for not trying to see things in perspective Accordingly we set out to persuade a number of our colleagues to join us in writing a book which might admit a little fresh air into the confined atmosphere within which we mostly work a glimpse perhaps of fresh vistas **Control of Carcinogens in the Environment** United States. Oppenheimer,1982 *Mechanisms of Carcinogenesis in Risk Identification* Harri Vainio,1992 This comprehensive authoritative volume includes a consensus document drawn up by a working group of international experts in various fields of carcinogenesis It describes the multistage and multifactorial nature of carcinogenesis the different mechanisms of action of carcinogens epidemiological and laboratory means for their identification and proposed principles and procedures for their possible use in the prediction and evaluation of carcinogenic risks to humans Other chapters cover critical molecular targets in chemical carcinogenesis mechanisms of carcinogenicity animal carcinogenicity tests and their interpretations biological markers in exposed humans and data analysis and modelling This work will be a valuable reference for cancer researchers and toxicologists *The Chemical Biology of DNA Damage* Nicholas E. Geacintov,Suse Broyde,2011-08-04 Bringing the power of biochemical analysis to toxicology this modern reference explains genotoxicity at the molecular level showing the links between a DNA lesion and the resulting cellular or organismic response Clearly divided into two main sections Part 1 focuses on selected examples of important DNA lesions and their biological impact while the second part covers current advances in assessing and predicting the genotoxic effects of chemicals taking into account the biological responses mediated by the DNA repair replication and transcription machineries A ready reference for biochemists toxicologists molecular and cell biologists and geneticists seeking a better understanding of the impact of chemicals on human health *Carcinogenesis--a Comprehensive Survey*,1985 **Guidelines for Chemical Carcinogen Risk Assessment and**

Becker,1982-01-31 Band 1 Mechanisms of Chemical Carcinogenesis D. E. Hathway,1986 Mechanisms of Chemical Carcinogenesis provides information pertinent to the fundamental mechanisms of chemical carcinogenesis This book surveys the interactions of chemical carcinogens with native DNA the activation of normal cellular sequences and the transforming role of the activated genes Organized into seven chapters this book begins with an overview of the relationship between the incidence of lung cancer and the frequency and duration of cigarette smoking This text then examines the concept that carcinogens may require metabolic activation before they initiate carcinogenesis Othe **Differentiation and Carcinogenesis in Liver Cell Cultures** Carmia Borek,Gary M.
