Controversies in Cardiovascular Anesthesia Phillip Fyman, Alexander W. Gotta, 2012-12-06 On 16 October 1846 an itinerant New England dentist named William T G Morton proved the anesthetic effect of diethyl ether in a public demonstration in the ether dome of the Bulfinch Building of the Massachusetts General Hospital in Boston The patient Gilbert Abbott suffered no pain and the surgeon Dr John C Warren was able to complete a suture ligation of a vascular tumor of the jaw without the hurry that until then was so necessary The operation proved a failure since the tumor recurred but the demonstration of ether's anesthetic effect was a great success Operative pain was conquered and surgery could advance from a crude and unscientific practice where speed was paramount and the major body cavities could not be entered into the unique blend of science and art that it is now Gentlemen this is no humbug supposedly muttered Warren perhaps the last noncontroversial assessment of anesthesiology to be made by a surgeon The screams of resisting patients in pain were stilled and quiet entered the operating room for the first time But the new science of pain relief was quickly wrapped in controversy An argument immediately arose as to who could legitimately claim primacy for the discovery Morton's attempt to hide the true nature of his anesthetic agent coupled with an effort to patent the discovery clouded his reputation and stimulated other claimants to push themselves forward
