Advanced ASP.NET Core 8 Security Scott Norberg, 2024-10-02 Most .NET developers do not incorporate security best practices when creating websites The problem Even if you use all of the best practices that the ASP.NET team recommends you are still falling short in several key areas due to issues within the framework itself And most developers don't use all of the best practices that are recommended If you

are interested in truly top notch security available sources don't give you the information you need Most blogs and other books simply state how to use the configurations within ASP NET but do not teach you security as understood by security professionals Online code samples aren't much help because they are usually written by developers who aren't incorporating security practices This book solves those issues by teaching you security first going over software best practices as understood by security professionals not developers Then it teaches you how security is implemented in ASP NET With that foundation it dives into specific security related functionality and discusses how to improve upon the default functionality with working code samples And you will learn how security professionals build software security programs so you can continue building software security best practices into your own Secure Software Development Life Cycle SSDLC What You'll Learn Know how both attackers and professional defenders approach web security Establish a baseline of security for understanding how to design more secure software Discern which attacks are easy to prevent and which are more challenging in ASP NET Dig into ASP NET source code to understand how the security services work Know how the new logging system in ASP NET falls short of security needs Incorporate security into your software development process Who This Book Is For Software developers who have experience creating websites in ASP NET and want to know how to make their websites secure from hackers and security professionals who work with a development team that uses ASP NET To get the most out of this book you should already have a basic understanding of web programming and ASP NET including creating new projects creating pages and using JavaScript Topics That Are New to This Edition This edition has been updated with the following changes Best practices and code samples updated to reflect security related changes in ASP NET 8 Improved examples including a fully functional website incorporating security suggestions Best practices for securely using Large Language Models LLMs and AI Expansions and clarifications throughout

The Role of Metadata in the Orchestration of Web Services Marlen Krebs, 2006-07-10 Diploma Thesis from the year 2006 in the subject Computer Science Software grade 1-3 Schmalkalden University of Applied Sciences language English abstract Orchestration is the study and practice of arranging music for an orchestra or musical ensemble In practical terms it consists of deciding which instruments should play which notes in a piece of music Wiki In musical terms the orchestra would be made up of Web services BPEL would be the sheet music and the business process manager BPM would be the composer that selects the necessary Web services and decides how they should interact with each other Organizations use Web services in two broad categories Enterprise Application Integration EAI and Business to Business B2B e-commerce as well as less complex scenarios such as technical functions and information services common services This thesis provides an insight on how the Web service standards resolve the limitations of conventional middleware and extend the benefits of process management to a wider scope of business problems Web service standards like SOAP XML WSDL and BPEL enable customers to solve integration problems easily by providing interoperability within a company or across multiple companies

and improve B2B eCommerce and supply chain management by shifting to a service oriented paradigm in application development Web service orchestration provides an open standards base approach to create high level business processes such as workflows This thesis will focus on BPEL for describing the business logic although competing standards are still in use The steps for the workflow implementation will be explained on the basis of a sample procurement scenario
