Complex Analysis: The Geometric Viewpoint: Second Edition Steven G. Krantz, 2004-12-31 Recipient of the Mathematical Association of America's Beckenbach Book Prize in 1994 In this second edition of a Carus Monograph Classic Steven Krantz develops material on classical non Euclidean geometry He shows how it can be developed in a natural way from the invariant geometry of the complex disc He also introduces the Bergman kernel and metric and provides profound applications some of them never having appeared before in print In general the new edition represents a considerable polishing and re thinking of the original successful volume This is the first and only book to describe the context the background the details and the applications of Ahlfors's celebrated ideas about curvature the Schwarz lemma and applications in complex analysis Beginning from scratch and requiring only a minimal background in complex variable theory this book takes the reader up to ideas that are currently active areas of study Such areas include a the Caratheodory and Kobayashi metrics b the Bergman kernel and metric and c boundary continuation of conformal maps There is also an introduction to the theory of several complex variables Poincaré's celebrated theorem about the biholomorphic inequivalence of the ball and polydisc is discussed and proved [Complex Analysis: the Geometric Viewpoint](#) Steven G.
