Complex Managerial Decisions Involving Multiple Objectives:

Complex Managerial Decisions Involving Multiple Objectives Allan Easton, 1980

Multiple Objective Decision Making — Methods and Applications C.-L. Hwang, A.S.M. Masud, 2012-12-06 Decision making is the process of selecting a possible course of action from all the available alternatives. In almost all such problems the multiplicity of criteria for judging the alternatives is pervasive. That is, for many such problems the decision maker (DM) wants to attain more than one objective or goal in selecting the course of action while satisfying the constraints dictated by environment processes and resources. Another characteristic of these problems is that the objectives are apparently non-commensurable. Mathematically, these problems can be represented as $\max_{x \in S} f(x)$ subject to $g_i(x) \leq 0$ where x is an n -dimensional decision variable vector. The problem consists of n decision variables, m constraints, and k objectives. Any or all of the functions may be nonlinear. In literature, this problem is often referred to as a vector maximum problem (VMP). Traditionally, there are two approaches for solving the VMP. One of them is to optimize one of the objectives while appending the other objectives to a constraint set so that the optimal solution would satisfy these objectives at least up to a predetermined level. The problem is given as $\max_{x \in S} f_1(x)$ subject to $f_2(x) \leq t$ where t is any acceptable predetermined level for objective 2. The other approach is to optimize a super-objective function created by multiplying each objective function with a suitable weight and then by adding them together.

Managerial Decisions Under Uncertainty Bruce F. Baird, 1991-01-16 How to improve decision making skills in realistic situations and do it in a reasonably non-mathematical fashion. Develops practical techniques for deciding upon the best strategies in a variety of situations. Provides methods for reducing complex problems to easily drawn decision diagrams, trees supported by real world examples. Includes detailed cases that employ the methods described in the text. Each chapter contains illustrative examples and exercises.

Multiobjective Programming and Planning Jared L. Cohon, 2013-01-18 This text takes a broad view of multiobjective programming, emphasizing the methods most useful for continuous problems. It reviews methods in the context of public decision making problems. 1978 edition.

Interactive Multiple Goal Programming J. Spronk, 2012-12-06

1.1 Motivation This book is based on the view that both public and private decision making in practice can often be improved upon by means of formal nonnative decision models and methods. To some extent, the validity of this statement can be measured by the impressive number of successes of disciplines as operations research and management science. However, as witnessed by the many discussions in the professional journals in these fields, many models and methods do not completely meet the requirements of decision making in practice. Of all possible origins of these clear shortcomings, we mainly focus on only one: the fact that most of these models and methods are unsuitable for decision situations in which multiple and possibly conflicting objectives play a role because they are concentrated on the optimal fulfillment of only one objective. The need to account for multiple goals was observed relatively early (Hoffman, 1955) while describing what seem to be the principal areas in linear programming where new ideas and new methods are needed: gives an example with conflicting goals. In this pro

blem the assignrrent of relative weights is a great problem for the planning staff and is probably not the province of the mathemati cian engaged in solving this problem These remarks were true pre cursors of later develor nents Nevertheless the need for methods dealing with multiple goals was not widely recognized until much later **Multiple Attribute Decision Making** Ching-Lai Hwang,Kwangsun Yoon,2012-12-06 This mono graph is intended for an advanced undergraduate or graduate course as well as for the researchers who want a compilation of developments in this rapidly growing field of operations research This is a sequel to our previous work entitled Multiple Objective Decision Making Methods and Applications A State of the Art Survey No 164 of the Lecture Notes The literature on methods and applications of Multiple Attribute Decision Making MADM has been reviewed and classified systematically This study provides readers with a capsule look into the existing methods their char acteristics and applicability to analysis of MADM problems The basic MADM concepts are defined and a standard notation is introduced in Part 11 Also introduced are foundations such as models for MADM trans formation of attributes fuzzy decision rules and methods for assessing weight A system of classifying seventeen major MADM methods is presented These methods have been proposed by researchers in diversified disciplines half of them are classical ones but the other half have appeared recently The basic concept the computational procedure and the characteristics of each of these methods are presented concisely in Part 111 The computational procedure of each method is illustrated by solving a simple numerical example Part IV of the survey deals with the applications of these MADM methods

Nagel,1989-09-26 The use of microcomputers as decision aids in law practice is increasing rapidly Nagel here shows how developments in software over the last few years are making microcomputers practically indispensable to lawyers as decision aids This is in contrast to his earlier book on Microcomputers as Decision Aids in Law Practice It dealt speculatively with ways in which decision aiding software could be used by lawyers for judicial prediction litigation strategy allocating scarce resources and negotiation

mediation The book is divided into three parts covering general developments specific lawyer skills and application to all fields of law The first part previews various uses of decision aiding software by practicing lawyers including a general discussion of the potential and actual benefits of such software How decision aiding software enhances specific lawyer skills comprises the second and largest part of the work Among the topics discussed are computer aided counseling computer aided mediation legal policy evaluation and computer aided advocacy law prediction and legal administration In the third part Nagel assesses applications of decision aiding software to all fields of law with an emphasis on contracts property torts family law criminal law constitutional law economic regulation international law civil procedure and criminal procedure In a provocative concluding chapter he deals with the thorny issues of individual ethics and professional responsibility in the context of microcomputers Because decision aiding software encourages decision makers to be much more explicit about their goals than they otherwise would be its use raises questions as to whose goals should be pursued and to what degree This is a nuts and bolts guidebook that will be a valuable tool for practicing attorneys with some knowledge of microcomputers and is recommended reading for legal scholars and law students
