Complex Decision Problems An Integrated Strategy For Resolution:

Complex Decision Problems K. J. Radford,1977 Strategic and Tactical Decisions K.J. Radford,2012-12-06 Much of the work that has been done in the last fifty years in the area of decision analysis has been concerned with situations in which formal mathematical models of the decision process can be used For example deterministic models of operations research have been used as a means of treating decisions under conditions of certainty Statistical decision theory has been applied to decision making under conditions of uncertainty and risk Some attempts have been made to treat decisions under conditions of competition by methods derived from game theory However many of the decisions that we meet today in business and in our daily lives do not fall conveniently into the areas covered by these models Many modern decisions are ill structured by nature These decisions have been called wicked in comparison to the tame decisions that yield to formal analytical treatment Complex decision situations are found in every aspect of our lives today They are normally centred around an issue opportunity venture or threat that involves an individual or an organization on the one hand and other participants on the other hand The issue in such a situation might involve for example the proposed move of the Head Office of a corporation from one political jurisdiction to another It might be concerned with the opportunities and new ventures that would arise with the introduction of a new and different type of product or service into an organization *Group Decision Making under Multiple Criteria* Ching-Lai Hwang,Ming-Jeng Lin,2012-12-06 This monograph is intended for an advanced undergraduate or graduate course of engineering and management science as well as for persons in business industry military or in any field who want an introductory and a capsule look into the methods of group decision making under multiple criteria This is a sequel to our previous works entitled Multiple Objective Decision Making Methods and Applications No 164 of the Lecture Notes and Multiple Attribute Decision Making Methods and Applications No 186 of the Lecture Notes Moving from a single decision maker the consideration of Lecture Notes 164 and 186 to a multiple decision maker setting introduces a great deal of complexity into the analysis The problem is no longer the selection of the most preferred alternative among the nondominated solutions according to one individual's single decision maker's preference structure The analysis is extended to account for the conflicts among different interest groups who have different objectives goals and so forth Group decision making under multiple criteria includes such diverse and interconnected fields as preference analysis utility theory social choice theory committee decision theory theory of voting game theory expert evaluation analysis aggregation of qualitative factors economic equilibrium theory etc these are simplified and systematically classified for beginners This work is to provide readers with a capsule look into the existing methods their characteristics and applicability in the complexity of group decision making **Governance Networks in the Public Sector** Erik Hans Klijn,Joop Koppenjan,Wouter Spekkink,Rianne Warsen,2015-08-28 Governance Networks in the Public Sector presents a comprehensive study of governance networks and the management of complexities in network settings Public private and non profit organizations

Basic Social Policy and Planning Hobart A Burch, 2012-11-12 In Basic Social Policy and Planning Burch presents a generic process for professional intervention and social work leadership that is required of those who desire to achieve improvements in the lives of those they serve Burch developed this text and guide so that even persons with no prior formal training in social planning can apply these principles in their practices Because few social workers are content with simply repairing the damages caused by inequities inadequacies and injustices in society Basic Social Policy and Planning offers a usable set of guidelines on how to change lives for the better in small and occasionally large ways from within any setting agency community and public policy Social workers nurses teachers and other human service professionals spend their lives relating to the social and emotional needs and problems of people Burch converts sophisticated policy and planning concepts and techniques into a form which experts and non experts can understand relate to and apply in their practices He supplies these workers with approaches methods models ways of thinking and techniques for planning He covers VIBES Values Interests Beliefs Ethics and Slants Understanding where you and others are coming from and toward what destination you and they are heading Systems theories and worldviews Understanding how these affect planning Logical analysis of all ways of thinking scientific and experiential bounded and nonbounded Different approaches to planning comprehensive rational analysis disjointed incrementalism and satisficing mixed scanning strategic decentralized contingency transactional and advocacy planning Global strategic tactical and project management levels of planning Needs assessment and participation of those who will be affected Quantitative and economic planning approaches Understanding basic ideology and assumptions Quantitative and economic approaches measurement pricing cost effectiveness and cost benefit analysis decision analysis

When used as a text the first priority of this book is to give BSW and MSW students the training which they will need and want later in their careers This training is consistent with Council on Social Work Education's required BSW MSW foundation courses as well as advance practice courses in most programs When used as a guidebook for the many practitioners who have learned since graduation that they need more skill in setting and achieving policy agency and community goals than they learned in school Basic Social Policy and Planning can enhance the left brain in social workers who as a group tend to be stronger in the right brain direction with chapters that walk the reader step by step through a generic rational planning model and tell why whom when and how to involve others in planning Because the substance of the book is rooted in advance interdisciplinary planning theory and practice this book is just what the doctor ordered for a doctoral first course in policy and planning it provides the hard background in planning for professors of policy and macro practice It is also highly appropriate for new PhDs who are assigned to teach such courses with limited background with its chapters on foundations of policy and planning various approaches to planning and
