Complex Dynamics:

Early Days in Complex Dynamics Daniel S. Alexander, Felice Iavernaro, Alessandro Rosa, 2012 The theory of complex dynamics whose roots lie in 19th century studies of the iteration of complex function conducted by Koenigs Schoder and others flourished remarkably during the first half of the 20th century when many of the central ideas and techniques of the subject developed This book by Alexander Iavernaro and Rosa paints a robust picture of the field of complex dynamics between 1906 and 1942 through detailed discussions of the work of Fatou Julia Siegel and several others A recurrent theme of the authors treatment is the center problem in complex dynamics They present its complete history during this period and in so doing bring out analogies between complex dynamics and the study of differential equations in particular the problem of stability in Hamiltonian systems Among these analogies are the use of iteration and problems involving small divisors which the authors examine in the work of Poincare and others linking them to complex dynamics principally via the work of Samuel Lattes in the early 1900s and Jurgen Moser in the 1960s Many details will be new to the reader such as a history of Lattes functions whose Julia set equals the Riemann sphere complex dynamics in the United States around the time of World War I a survey of complex dynamics around the world in the 1920s and 1930s a discussion of the dynamical programs of Fatou and Julia during the 1920s and biographical material on several key figures The book contains graphical renderings of many of the mathematical objects the authors discuss including some of the intriguing fractals Fatou and Julia studied and concludes with several appendices by current researchers in complex dynamics which collectively attest to the impact of the work of Fatou Julia and others upon the present day study

Complex Dynamics Dierk Schleicher, 2009-11-03 Complex Dynamics Families and Friends features contributions by many of the leading mathematicians in the field such as Mikhail Lyubich John Milnor Mitsuhiro Shishikura and William Thurston Some of the chapters including an introduction by Thurston to the general subject of complex dynamics are classic manuscripts that were never published

Complex Dynamics and Renormalization Curtis T. McMullen, 1994-12-19 Addressing researchers and graduate students in the active meeting ground of analysis geometry and dynamics this book presents a study of renormalization of quadratic polynomials and a rapid introduction to techniques in complex dynamics Its central concern is the structure of an infinitely renormalizable quadratic polynomial $f(z) = z^2 + c$ As discovered by Feigenbaum such a mapping exhibits a repetition of form at infinitely many scales Drawing on universal estimates in hyperbolic geometry this work gives an analysis of the limiting forms that can occur and develops a rigidity criterion for the polynomial f This criterion supports general conjectures about the behavior of rational maps and the structure of the Mandelbrot set The course of the main argument entails many facets of modern complex dynamics Included are foundational results in geometric function theory quasiconformal mappings and hyperbolic geometry Most of the tools are discussed in the setting of general polynomials and rational maps

Complex Dynamics and Geometry Dominique Cerveau, 2003 In the last twenty years the theory of

holomorphic dynamical systems has had a resurgence of activity particularly concerning the fine analysis of Julia sets associated with polynomials and rational maps in one complex variable At the same time closely related theories have had a similar rapid development for example the qualitative theory of differential equations in the complex domain The meeting Etat de la recherche held at Ecole Normale Supérieure de Lyon presented the current state of the art in this area emphasizing the unity linking the various sub domains This volume contains four survey articles corresponding to the talks presented at this meeting D Cerveau describes the structure of polynomial differential equations in the complex plane focusing on the local analysis in neighborhoods of singular points E Ghys surveys the theory of laminations by Riemann surfaces which occur in many dynamical or geometrical situations N Sibony describes the present state of the generalization of the Fatou Julia theory for polynomial or rational maps in two or more complex dimensions Lastly the talk by J C Yoccoz written by M Flexor considers polynomials of degree 2 in one complex variable and in particular with the hyperbolic properties of these polynomials centered around the Jakobson theorem This is a general introduction that gives a basic history of holomorphic dynamical systems demonstrating the numerous and fruitful interactions among the topics In the spirit of the Etat de la recherche de la SMF meetings the articles are written for a broad mathematical audience especially students or mathematicians working in different fields This book is translated from the French edition by Leslie Kay

members have explored more than just mathematics we have as this volume tries to make evident investigated mathematical connections to pedagogy history the arts technology literature every field of intellectual endeavor Essays all commissioned

for this volume include exposition by Bob Devaney Robin Wilson and Frank Morgan history from Karen Parshall Della Dumbaugh and Bill Dunham pedagogical discussion from Paul Zorn Joe Gallian and Michael Starbird and cultural

commentary from Bonnie Gold Jon Borwein and Steve Abbott This volume contains 35 essays by all star writers and expositors writing to celebrate an extraordinary century for mathematics more mathematics has been created and published

since 1915 than in all of previous recorded history We ve solved age old mysteries created entire new fields of study and changed our conception of what mathematics is Many of those stories are told in this volume as the contributors paint a

portrait of the broad cultural sweep of mathematics during the MAA s first century Mathematics is the most thrilling the most human area of intellectual inquiry you will find in this volume compelling proof of that claim Transient Chaos

Ying-Cheng Lai,Tamás Tél,2011-02-26 The aim of this Book is to give an overview based on the results of nearly three decades of intensive research of transient chaos One belief that motivates us to write this book is that transient chaos may

Rotation Sets and Complex Dynamics

Saeed Zakeri, 2018-06-23 This monograph examines rotation sets under the multiplication by $d \pmod{1}$ map and their relation to degree d polynomial maps of the complex plane These sets are higher degree analogs of the corresponding sets under the angle doubling map of the circle which played a key role in Douady and Hubbard's work on the quadratic family and the Mandelbrot set Presenting the first systematic study of rotation sets treating both rational and irrational cases in a unified fashion the text includes several new results on their structure their gap dynamics maximal and minimal sets rigidity and continuous dependence on parameters This abstract material is supplemented by concrete examples which explain how rotation sets arise in the dynamical plane of complex polynomial maps and how suitable parameter spaces of such polynomials provide a complete catalog of all such sets of a given degree As a main illustration the link between rotation sets of degree 3 and one dimensional families of cubic polynomials with a persistent indifferent fixed point is outlined The monograph will benefit graduate students as well as researchers in the area of holomorphic dynamics and related fields
