Complexes Associated To Two Vectors And A Rectangular Matrix:

Complexes Associated to Two Vectors and a Rectangular Matrix Andrew R. Kustin, 2000 This book is intended for graduate student and research mathematicians interested in commutative rings and algebras Multi-Interval Linear Ordinary Boundary Value Problems and Complex Symplectic Algebra William Norrie Everitt, Lawrence Markus, 2001 A multi interval quasi differential system $I_r M_r w_r r$ in Ω consists of a collection of real intervals I_r as indexed by a finite or possibly infinite index set Ω where $\text{card } \Omega \geq \aleph_0$ is permissible on which are assigned ordinary or quasi differential expressions M_r generating unbounded operators in the Hilbert function spaces $L_r^2 \equiv L^2(I_r w_r r)$ where w_r are given non negative weight functions For each fixed r in Ω assume that M_r is Lagrange symmetric formally self adjoint on I_r and hence specifies minimal and maximal closed operators T_{0r} and T_{1r} respectively in L_r^2 However the theory does not require that the corresponding deficiency indices d_{-r} and d_{+r} of T_{0r} are equal e.g the symplectic excess $Ex_r = d_{-r} - d_{+r} \neq 0$ in which case there will not exist any self adjoint extensions of T_{0r} in L_r^2 In this paper a system Hilbert space $\mathbf{H} = \sum_{r \in \Omega} L_r^2$ is defined even for non countable Ω with corresponding minimal and maximal system operators \mathbf{T}_{-0} and \mathbf{T}_{-1} in \mathbf{H} Then the system deficiency indices $\mathbf{d}_{\pm} = \sum_{r \in \Omega} d_{\pm r}$ are equal system symplectic excess $Ex = 0$ if and only if there exist self adjoint extensions \mathbf{T} of \mathbf{T}_{-0} in \mathbf{H} The existence is shown of a natural bijective correspondence between the set of all such self adjoint extensions \mathbf{T} of \mathbf{T}_{-0} and the set of all complete Lagrangian subspaces \mathbf{L} of the system boundary complex symplectic space $\mathbf{S} = \mathbf{D} \mathbf{T}_{-1} \oplus \mathbf{D} \mathbf{T}_{-0}$ This result generalizes the earlier symplectic version of the celebrated GKN Theorem for single interval systems to multi interval systems Examples of such complete Lagrangians for both finite and infinite dimensional complex symplectic \mathbf{S} illuminate new phenomena for the boundary value problems of multi interval systems These concepts have applications to many particle systems of quantum mechanics and to other physical problems

Cohomology of Vector Bundles and Syzygies Jerzy Weyman, 2003-06-09

The central theme of this book is an exposition of the geometric technique of calculating syzygies It is written from a point of view of commutative algebra and without assuming any knowledge of representation theory the calculation of syzygies of determinantal varieties is explained The starting point is a definition of Schur functors and these are discussed from both an algebraic and geometric point of view Then a chapter on various versions of Bott's Theorem leads on to a careful explanation of the technique itself based on a description of the direct image of a Koszul complex Applications to determinantal varieties follow plus there are also chapters on applications of the technique to rank varieties for symmetric and skew symmetric tensors of arbitrary degree closures of conjugacy classes of nilpotent matrices discriminants and resultants Numerous exercises are included to give the reader insight into how to apply this important method

Surfaces with $K^2 = 7$ and $p_g = 4$ Ingrid C. Bauer, 2001 The aim of this monograph is the exact description of minimal smooth algebraic surfaces over the complex numbers with the invariants $K^2 = 7$ and $p_g = 4$ The interest in this fine classification of algebraic surfaces of general type goes back to F Enriques who dedicates a large part of his celebrated book *Superficie Algebriche* to this problem The cases $p_g = 4$ $K^2 \leq 6$ were treated in the past by several authors among others M Noether F Enriques E Horikawa and it is worthwhile to remark that already the case $K^2 = 6$ is rather complicated and it is up to now not possible to decide whether the moduli space of these surfaces [Generalized Whittaker Functions on \$SU\(2,2\)\$ with Respect to the Siegel Parabolic Subgroup](#) Yasuro Gon, 2002 Obtains an explicit formula for generalized Whittaker functions and multiplicity one theorem for all discrete series representations of $SU(2,2)$

Homogeneous Spaces, Tits Buildings, and Isoparametric Hypersurfaces Linus Kramer, 2002 This title classifies 1 connected compact homogeneous spaces which have the same rational cohomology as a product of spheres $S^1 \times \dots \times S^k$ $DEGREES_{n_1} \times \dots \times DEGREES_{n_k}$ with $3 \leq n_1 \leq n_2 \leq \dots \leq n_k$ and n_k odd As an application it classifies compact generalized quadrangles buildings of type C_2 which admit a point transitive automorphism group and isoparametric hypersurfaces which admit a transitive isometry group on one f

Desingularization of Nilpotent Singularities in Families of Planar Vector Fields Daniel Panazzolo, 2002 This work aims to prove a desingularization theorem for analytic families of two dimensional vector fields under the hypothesis that all its singularities have a non vanishing first jet Application to problems of singular perturbations and finite cyclicity are discussed in the last chapter

[Mining Complex Networks](#) Bogumil Kaminski, Pawel Prałat, Francois Theberge, 2021-12-14 This book concentrates on mining networks a subfield within data science Data science uses scientific and computational tools to extract valuable knowledge from large data sets Once data is processed and cleaned it is analyzed and presented to support decision making processes Data science and machine learning tools have become widely used in companies of all sizes Networks are often large scale decentralized and evolve dynamically over time Mining complex networks aim to understand the principles governing the organization and the behavior of such networks is crucial for a broad range of fields of study Here are a few selected typical applications of mining networks Community detection which users on some social media platforms are close friends Link prediction who is likely to connect to whom on such platforms Node attribute prediction what advertisement should be shown to a given user of a particular platform to match their interests Influential node detection which social media users would be the best
