The paper defends the World Health Organisation (WHO) definition of health against widespread criticism. The common objections are due to a possible misinterpretation of the word *complete* in the descriptor of health as ‘complete physical, mental and social well-being’. *Complete* here does not necessarily refer to perfect well-being but can alternatively mean exhaustive well-being, that is, containing all its constitutive features. In line with the alternative reading, I argue that the WHO definition puts forward a holistic account, not a notion of perfect health. I use historical and analytical evidence to defend this interpretation. In the second part of the paper, I further investigate the two different notions of health (holistic health and perfect health). I argue that both ideas are relevant but that the holistic interpretation is more adept for political aims.

## Introduction

‘Health is a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity’ (World Health Organisation [WHO], 1948: 100). In this paper, I argue that this famous WHO definition of health is fully adequate. Criticism that has been levied against it is based on a specific interpretation that is not the only alternative. In addition to defending the WHO definition, I will discuss two different meanings of the concept of health, which can lead to confusion if not properly kept apart. This is important, for historical and analytical reasons, because the WHO definition can indeed be interpreted in different ways and because we need to get to grips with the differences between types of definitions of health. My second aim in this paper is hence to explain and to properly keep apart two different conceptualisations of health.<sup>1</sup>

As regards the WHO definition, I will claim that critics have read the word *complete* in the phrase ‘complete physical, mental and social well-being’ in a way that goes against the likely intentions of the drafters of the definition. The common objections, for instance, accusing the WHO definition of utopianism and overreach, are based on an implicit assumption, according to which *complete* is a quantitative term. In other words, critics assume that the phrase means that health is a state of well-being to the largest degree. I will call this interpretation *perfect health*. So, the critics claim that the WHO identifies

health with the largest degree of well-being, that is, with perfect well-being or—in less technical terms—with happiness.

However, the term *complete* can also have a qualitative meaning.<sup>2</sup> When we say that something is a complete specimen of its kind, then we mean that it has all the features that are constitutive of it. For instance, a complete dinner is one that contains a starter, a main dish and a dessert. Accordingly, complete well-being might be understood as a state that is exhaustive of all constitutive features of well-being. These are, according to the WHO, physical, mental and social aspects. I will call this *holistic health*.<sup>3</sup> In brief, I will claim that the WHO endorses a holistic account of health, not a perfectionist account.<sup>4</sup>

In the second section, I briefly introduce the most important objections to the WHO definition. They have mainly to do with an alleged confusion of health with happiness, which then purportedly leads to a form of medicalisation of human life. In the third section, I discuss the likely intentions behind the WHO definition. I do this by referring to the two readings mentioned before, perfect health and holistic health. There are systematic and historical reasons as to why the WHO plausibly intended a holistic interpretation of health. In the fourth section, I discuss the two interpretations of health in their own right. I introduce their purposes and some objections to either notion. As is the case with many concepts we use, there is no single right or wrong conceptualisation of health. However, I argue that a

**Structural and Systemic Perspectives on Health and Well-being** Louise Dalingwater, Arnaud Page, Liana B. Winett, 2026-01-01 This volume provides a background to debates on definitional terms of subjective and objective wellbeing Beyond that it analyses discourse and policy practice relating to population level and individual health and wellbeing promotion The chapters in this volume illustrate salient aspects relating to health and wellbeing how the post pandemic world seems to be at a tipping point in terms of worsening outcomes for the social determinants of health and wellbeing how health and wellbeing approaches in the educational sector can be seen as rhetoric devices to promote reform but also as a meaningful way to promote student flourishing how holistic approaches to health and wellbeing namely embedding arts and culture in a healthcare setting can support enhanced wellbeing of frontline healthcare staff and how specific health and wellbeing issues relating to women and their integration into the workforce remain fraught with difficulty Finally the volume analyses efforts to improve health and wellbeing in the face of political turmoil This highly interdisciplinary volume includes contributions from senior academics and early career researchers in political science social science area studies and economics and is an important contribution to the SDG and broader literature on policies related to health and wellbeing

**Habilitation, Health, and Agency** Lawrence C. Becker, 2012-06-15 Lawrence C Becker introduces an unconventional set of background ideas for future philosophical work on normative theories of basic justice The organizing concept is habilitation the process of equipping a person or thing with functional abilities or capacities The specific proposals drawn from the concept of habilitation are independent of any particular set of distributive principles The

result is a framework for theory that includes a metric for the pursuit of basic justice but not a normative theory of it The basic idea is that receiving and providing habilitation is a lifelong necessity for human beings from their nearly helpless newborn state through their struggles to survive and thrive thereafter even into the most severe diminishments of old age This lifelong human necessity underlies all questions about basic justice and the possibilities for habilitation define the circumstances under which those questions arise Focusing on the circumstances of habilitation calls attention to the central role of physical and psychological health Without basic good health in both domains it is not possible to cope with the habilitative demands of one s physical and psychological endowments and one s physical and social environments And for human beings a particular aspect of human health effectively sums up these matters namely human agency the nature and extent of the ability to act effectively The book proposes specifically that normative theories of basic justice adopt the habilitation framework What then appears to follow is that the most plausible comprehensive metric for assessing progress toward basic justice will be the level and distribution of basic good health Moreover achieving robustly healthy agency will be the most plausible tactical target for making progress toward basic justice no matter what one s favored distributive principles might be
