Complex Analysis, Operators, and Related Topics Victor P. Havin, Nikolai K. Nikolski, 2012-12-06 This volume is devoted to some topical problems and various applications of operator theory and its interplay with modern complex analysis It consists of 30 carefully selected surveys and research papers The main subjects of the volume include free interpolation by analytic functions in its development from the pathbreaking works by L Carleson up to the most recent achievements and in its connections with the theory of singular integral operators and Carleson type embedding theorems moment problems etc Sz kefalvi Nagy Foias model spaces studied from the point of view of holomorphic spaces holomorphic spaces Hardy Bergman H lder and Sobolev spaces analytic functions smooth up to the boundary with their subtle properties related to the Nevanlinna Smirnov factorization division and multiplication and zero sets a new approach to weighted inequalities for singular integrals based on the Bellman function in optimization theory the uncertainty principle in harmonic analysis and in particular a complete version of Turan s lemma on trigonometric sums Hankel operators and stationary Gaussian processes Fourier multipliers and spectral analysis of some differential operators These themes are united by the operator theoretic ideology and systematic use of modern function theoretical techniques The book is dedicated to the memory of S A

Vinogradov It contains a bibliographical note with a lively portrait of S A Vinogradov a detailed survey of his mathematical achievements and a complete list of publications as well as the translations of two of Vinogradov s surveys whose Russian originals are now hardly accessible From Complex Analysis to Operator Theory: A Panorama Malcolm Brown, Fritz

Gesztesy, Pavel Kurasov, Ari Laptev, Barry Simon, Gunter Stolz, Ian Wood, 2023-09-21 This volume is dedicated to the memory of Sergey Naboko 1950 2020 In addition to original research contributions covering the vast areas of interest of Sergey Naboko it includes personal reminiscences and comments on the works and legacy of Sergey Naboko s scientific achievements Areas from complex analysis to operator theory especially spectral theory are covered and the papers will inspire current and future researchers in these areas **Basics of Functional Analysis with Bicomplex Scalars, and**

Bicomplex Schur Analysis Daniel Alpay, Maria Elena Luna-Elizarrarás, Michael Shapiro, Daniele C. Struppa, 2014-03-19 This book provides the foundations for a rigorous theory of functional analysis with bicomplex scalars It begins with a detailed study of bicomplex and hyperbolic numbers and then defines the notion of bicomplex modules After introducing a number of norms and inner products on such modules some of which appear in this volume for the first time the authors develop the theory of linear functionals and linear operators on bicomplex modules All of this may serve for many different developments just like the usual functional analysis with complex scalars and in this book it serves as the foundational material for the construction and study of a bicomplex version of the well known Schur analysis **Complex Analysis, Operators, and**

in Function Spaces Kehe Zhu, 2007 This book covers Toeplitz operators Hankel operators and composition operators on both the Bergman space and the Hardy space The setting is the unit disk and the main emphasis is on size estimates of these operators boundedness compactness and membership in the Schatten classes Most results concern the relationship between operator theoretic properties of these operators and function theoretic properties of the inducing symbols Thus a good portion of the book is devoted to the study of analytic function spaces such as the Bloch space Besov spaces and BMOA whose elements are to be used as symbols to induce the operators we study The book is intended for both research mathematicians and graduate students in complex analysis and operator theory The prerequisites are minimal a graduate course in each of real analysis complex analysis and functional analysis should sufficiently prepare the reader for the book Exercises and bibliographical notes are provided at the end of each chapter These notes will point the reader to additional results and problems Kehe Zhu is a professor of mathematics at the State University of New York at Albany His previous books include Theory of Bergman Spaces Springer 2000 with H Hedenmalm and B Korenblum and Spaces of Holomorphic Functions in the Unit Ball Springer 2005 His current research interests are holomorphic function spaces and operators acting on them
