The History, Structure, Economy and Diseases of the Sheep William Charles Spooner,1874

Theory of Structure Arthur Morley,1918

The Structure of Style Shlomo Argamon,Kevin Burns,Shlomo Dubnov,2010-09-13 Style is a fundamental and ubiquitous aspect of the human experience Everyone instantly and constantly assesses people and things according to their individual styles academics establish careers by researching musical artistic or architectural styles and entire industries maintain themselves by continuously creating and marketing new styles Yet what exactly style is and how it works are elusive We certainly know it when we see it but there is no shared and clear understanding of the diverse phenomena that we call style The Structure of Style explores this issue from a computational viewpoint in terms of how information is represented organized and transformed in the production and perception of different styles New computational techniques are now making it possible to model the role of style in the creation of and response to human artifacts and therefore to develop software systems that directly make use of style in useful ways Argamon Burns and Dubnov organize the research they have collected in this book according to the three roles that computation can play in stylistics The first section of the book Production provides conceptual foundations by describing computer systems that create artifacts musical pieces texts artworks in different styles The second section Perception explains methods for analyzing different styles and gleaning useful information viewing style as a form of communication The final section Interaction deals with reciprocal interaction between style producers and perceivers in areas such as interactive media improvised musical accompaniment and game playing The Structure of Style is written for researchers and practitioners in areas including information retrieval computer art and music digital humanities computational linguistics and artificial intelligence who can all benefit from this comprehensive overview and in depth description of current research in this active interdisciplinary field

Arts - Therapies - Communication European Arts Therapy Line Kossolapow,Sarah Scoble,2005 Stipulation of a present actual position of Art Therapy however inevitably leads to further thoughts about ongoing development Everything required for the theoretical practical founding of a European Art Therapy as discipline still has to be done including construction of a communicative bridge to partners in other continents or countries This development work has two strands of development One follows a more theoretical direction with European Art

Therapy as a research and teaching subject as an objective in view The other is directed more towards practical fieldwork which in turn can lead to the establishment of funds of experience as well as quantitative and qualitative investigations and thus to theoretical methodical statements In the contributions on hand both connections pervade Naturally the individual articles in this collection do not fully expound the volume of art therapeutic work throughout Europe but they are a source of information and inspiration for the user from theory and or practice who can then find his particular niche with his own specific interests within the cross section and subsequently continue the discourse spatially and objectively

Promoting Inclusion and Representation: The Role of Cultural Diversity in Sports Mário Borges, António Fernando Rosado , Rita F. De Oliveira, 2025-10-24 Cultural diversity in sports is a dynamic and multifaceted field that has garnered significant attention in recent years Sports have the unique ability to unite individuals from various cultural backgrounds yet they also have the potential to underscore and magnify cultural disparities Despite the global nature of sports there remains a notable disparity in the representation and inclusion of diverse cultures within many sports teams leadership roles and organizations This imbalance can hinder the full potential of athletes from diverse backgrounds and limit the growth of sports Recent studies have highlighted the importance of cultural factors in shaping sports participation and performance as well as the experiences of athletes and coaches from diverse cultural backgrounds Initiatives like the Kick it Out campaign in English football have made strides in raising awareness about racism and promoting diversity However there is still a pressing need for more comprehensive research to understand the nuances of cultural diversity in sports and to measure the progress of these initiatives This research topic aims to investigate the barriers to cultural diversity in sports the benefits of culturally diverse sporting environments and to identify actionable steps for organizations teams and governing bodies to promote and achieve cultural diversity Key questions include How do cultural factors influence sports participation and performance What are the experiences of athletes and coaches from diverse cultural backgrounds How can sports organizations and policymakers foster greater inclusion and representation What role do media representations play in shaping cultural perceptions of sports By addressing these questions the research seeks to provide a deeper understanding of the complex relationship between culture and sports To gather further insights into the boundaries of cultural diversity in sports we welcome articles addressing but not limited to the following themes Personal stories of athletes or coaches from different backgrounds focusing on challenges faced achievements and their unique experiences Exploring how social norms of different cultures influence sports participation Analyzing the portrayal of culturally diverse athletes or coaches in media including biases stereotypes and positive showcases Sports as a platform for cultural integration and assimilation in multicultural societies This research topic encourages contributions from a range of disciplines including sport and exercise psychology cultural studies sociology and sport management and invites diverse methodological approaches to enrich the discourse on cultural diversity in sports

Perspectives on information structure in Austronesian languages Sonja

Riesberg, Asako Shiohara, Atsuko Utsumi, 2018 Information structure is a relatively new field to linguistics and has only recently been studied for smaller and less described languages. This book is the first of its kind that brings together contributions on information structure in Austronesian languages. Current approaches from formal semantics, discourse studies, and intonational phonology are brought together with language-specific and cross-linguistic expertise of Austronesian languages. The 13 chapters in this volume cover all subgroups of the large Austronesian family, including Formosan, Central Malayo-Polynesian, South Halmahera, West New Guinea, and Oceanic. The major focus though lies on Western Malayo-Polynesian languages. Some chapters investigate two of the largest languages in the region, Tagalog and different varieties of Malay; others study information structural phenomena in small underdescribed languages. The three overarching topics that are covered in this book are NP marking and reference tracking devices, syntactic structures and information structural categories, and the interaction of information structure and prosody. Various data types build the basis for the different studies compiled in this book. Some chapters investigate written texts such as modern novels (cf. Djénar's chapter on modern standard Indonesian) or compare different text genres such as, for example, oral narratives and translations of biblical narratives (cf. De Busser's chapter on Bunun). Most contributions, however, study natural spoken speech and make use of spoken corpora which have been compiled by the authors themselves. The volume comprises a number of different methods and theoretical frameworks. Two chapters make use of the Question Under Discussion approach developed in formal semantics (cf. the chapters by Latrouite, Shiohara, Riester, Riesberg, et al.). They apply the recently developed method of Rapid Prosody Transcription (RPT) to investigate native speakers' perception of prosodic prominences and boundaries in Papuan Malay. Other papers discuss theoretical consequences of their findings. Thus, for example, Himmelmann takes apart the most widespread framework for intonational phonology, ToBI, and argues that the analysis of Indonesian languages requires much simpler assumptions than the ones underlying the standard model. Arka Sedeng asks the question how fine-grained information structure space should be conceptualized and modelled (e.g. in LFG). Schnell argues that elements that could be analysed as topic and focus categories should better be described in terms of packaging and do not necessarily reflect any pragmatic roles in the first place.
