Artful Universe:

The Artful Universe Expanded John Barrow, 2011-03-10 In *The Artful Universe* OUP 1995 John D Barrow explored the close ties between our aesthetic appreciation and the basic nature of the Universe challenging the commonly held view that our sense of beauty is entirely free and unfettered It looked at some of the unexpected ways in which the structure of the Universe its laws its environments and above all its underlying mathematical structure imprints itself on our thoughts our aesthetic preferences and our views about the nature of things The exploration embraced topics such as perspective the size of things and the origins of aesthetics computer art posing the question is it art and the origins of our susceptibility to music Life sales of the hardback totalled just over 25 000 copies The study of the evolutionary and mathematical underpinnings of our aesthetic sense and our understanding of the nature and scale of the universe has grown over the past decade with developments in evolutionary psychology and in cosmology This paperback of the revised edition OUP 2005 contains eight new sections covering the recent discoveries of extrasolar planets fashionable postmodernist rejection of science as uncovering objective reality growing understanding of key ratios appearing in biological relationships and studies of the underlying mathematical structure of a Pollock painting

How Large Is God John Marks Templeton, 2022-08-22 This new collection of essays reveals how very little we know about God and fundamental spiritual principles In recent years scientific research has revealed that the universe is staggering in size and intricacy and some scientists are now suggesting that our definition of God is much too small Nine distinguished scholars and scientists present their varied views on the dimensions of God Edited by philanthropist John Marks Templeton this fascinating and challenging book continues the exploration of theological and philosophical implications of the momentous and accelerating scientific discoveries of our times

Sacred Nature Karen Armstrong, 2022-09-06 From one of the most original thinkers on the role of religion in the modern world a profound exploration of the spiritual power of nature and an urgent call to reclaim that power in everyday life Much has been written on the scientific and technological aspects of climate change But Armstrong s book is both more personal and more profound Its urgent message is that hearts and minds need to change if we are to once more learn to revere our beautiful and fragile planet The Guardian Since the beginning of time humankind has looked upon nature and seen the divine In the writings of the great thinkers across religions the natural world inspires everything from fear to awe to tranquil contemplation God or however one defined the sublime was present in everything Yet today even as we admire a tree or take in a striking landscape we rarely see nature as sacred In this short but deeply powerful book the best selling historian of religion Karen Armstrong re sacralizes nature for modern times Drawing on her vast knowledge of the world s religious

traditions she vividly describes nature's central place in spirituality across the centuries. In bringing this age-old wisdom to life, Armstrong shows modern readers how to rediscover nature's potency and form a connection to something greater than ourselves. *New Scientist*, 1997

Plant Lives Ellison Banks Findly, 2008 This book examines for the first time those threads in Indian thought that present a pro-life view of plants. Using texts from Vedic, Hindu, Jain, and Buddhist traditions, the author argues that there is strong support in early materials that plants are thought to be alive, to be sentient, and have the one sense of touch to feel pleasure and pain, to have an interior consciousness, and to be bearers of karma. Moreover, while plants are traditionally thought to be of tamasic quality with their immobility and dullness, they are sometimes described as sattvic with their calmness, even-mindedness, and service to others. In fact, the author argues, plants are frequently used to provide a model for the practiced ascetic: in that they bend but don't break with the wind, aren't distracted when buzzed by a mosquito, and flourish in their steadfastness. Given the theoretical discussion of plants within the range of sentient being, the book then focuses on the intimate life humans have with plants. Texts devoted to botany, medicine, law, art, literature, and religion, for example, depict human conversation with trees, humans marrying trees, and humans delineating their responsibilities for the well-being of plants in the greatest detail. Most difficult is the problem of eating, and in that, ahimsa or non-violence towards plants would be the ideal. In the extreme vegetarianism shows up the compromise that is made once plants are brought into the sentient realm. Finally, the author explores the founding premises of several current environmental leaders and movements in India that focus on plants, e.g., tree protection, tree planting, seed saving, biodiversity, to examine whether contemporary plant-oriented ecological activism in India reflects older traditional ideas about plants. Asking whether new Hindu, Jain, or Buddhist movements reflect respective older ideas, the author finds that contemporary Indian practices remain on the whole authentic reflections of their older roots. Boundaries And Barriers John L. Casti, Anders Karlqvist, 1996-09-15 Are there scientific problems that cannot be solved? Mathematics is riddled with such problems, but can we pose analogous questions outside of mathematics? Does nature itself impose fundamental limits on our knowledge of the universe? Despite the work of some of the greatest minds of the twentieth century, no one really knows. In

May 1995 this profound and far reaching concern brought together a small but select group of scientists in a remote scientific outpost in Abisko Sweden a village far north of the Arctic Circle Boundaries and Barriers captures the spirit and the content of the talks given at the meeting Included are contributions by John Barrow on the limits of science John Casti on the search for the unknowable in science James Hartle on quantum cosmology Harold Morowitz on complexity and epistemology and six more fascinating chapters that illuminate the possible limits to what we can know by using the tools of science The issues discussed here challenge the very foundations of science but the conclusions are optimistic When the dust clears science remains standing our best bet for understanding the way the world works **Timeless Beauty** John Lane,2003 In this book John Lane calls us to awaken to the possibilities of a culture that recognizes the importance of beauty and to acknowledge that we are only fully human in contact with the beautiful Once people were instinctively tuned to the beautiful In those distant days before the advent of the motor car and the washing machine the electric toothbrush and the wheel craftsmen and musicians masons and poets painters and dancers simply did not know how to make an ugly thing they could not close their hearts to the light of heaven For countless numbers of them beauty was as necessary as the air they breathed It gave dignity and meaning to drab and impoverished lives and inspired great but often brutal civilizations in which people lived creative and useful lives Beauty is the nourishment of the soul It is something that gives us dignity as a species and this lovely volume celebrates it *Perspectives on Science and Christian Faith* ,1997
