Biomimetics Yoseph Bar-Cohen, 2016-04-19 A review of the current state of the art of biomimetics this book documents key biological solutions that provide a model for innovations in engineering and science Leading experts explore a wide range of topics including artificial senses and organs mimicry at the cell materials interface modeling of plant cell wall architecture biomimetic composites artificial muscles biomimetic optics and the mimicking of birds insects and marine biology The book also discusses applications of biomimetics in manufacturing products medicine and robotics biologically inspired design as a tool for interdisciplinary education and the biomimetic process in artistic creation

Interface Oral Health Science 2009 Takashi Sasano, Osamu Suzuki, 2010-04-03 Since 2002 the Tohoku University Graduate School of Dentistry has proposed Interface Oral Health Science as a major theme for next generation dental research That theme is based on the following new concept healthy oral function is maintained by biological and biomechanical harmony among three systems 1 oral tissues host 2 parasitic microorganisms of the oral cavity parasites and 3 biomaterials The concept implies that oral diseases such as dental caries periodontal disease and temporomandibular disorders should be interpreted as interface disorders that result from disruption of the intact interface among these systems The uniqueness of this concept rests on the fact that it not only encompasses the field of dentistry and dental medicine but also expands the common ground shared with other fields including medicine agriculture material science engineering and pharmacology We aim to promote advances in dental research and to activate collaboration with related fields by putting interface oral health science into practice On this basis we have already organized the 1st and 2nd International Symposiums for Interface Oral Health Science which included inspiring special lectures symposiums poster presentations and other discussions The contents of the two symposiums were published as monographs entitled *Interface Oral Health Science* in 2005 and 2007 The 3rd International Symposium was held in January 2009 as part of this project

[New Perspectives on Mineral Nucleation and Growth](#) Alexander E.S. Van Driessche, Matthias Kellermeier, Liane G. Benning, Denis Gebauer, 2016-12-20 In the last decade numerous studies have demonstrated the existence of alternative pathways to nucleation and crystallisation that oppose the classical view Such proposed scenarios include multistage reactions proceeding via various precursor species and or intermediate phases The aim of this book is to review and discuss these recent advances in our understanding of the early stages of mineralisation through a series of contributions that address both experimental and theoretical studies about the formation and nature of initial precursor species e.g prenucleation clusters dense liquid phases amorphous nanoparticles etc as well as their transformations leading to the stable mineral phase Several chapters are devoted to cutting edge analytical techniques used for investigating the above processes in situ in real time and at conditions relevant to both natural and industrial processes At the end of the book the editors summarize the key questions that still need to be addressed in order to establish a complete picture of the nucleation and growth processes involved during the formation of minerals

Biomimetics Amitava Mukherjee,2010-03-01 Nature's evolution has led to the introduction of highly efficient biological mechanisms. Imitating these mechanisms offers an enormous potential for the improvement of our day to day life. Ideally by bio inspiration we can get a better view of nature's capability while studying its models and adapting it for our benefit. This book takes us into the interesting world of biomimetics and describes various arenas where the technology is applied. The 25 chapters covered in this book disclose recent advances and new ideas in promoting the mechanism and applications of biomimetics.

Biom mineralization and Biomaterials Conrado Aparicio, Maria Pau Ginebra,2015-09-28 Biom mineralization is a natural process by which living organisms form minerals in association with organic biostructures to form hybrid biological materials such as bone, enamel, dentine and nacre among others. Scientists have researched the fundamentals of these processes and the unique structures and properties of the resulting mineralized tissues. Inspired by them, new biomaterials for tissue engineering and regenerative medicine have been developed in recent years. Biom mineralization and biomaterials fundamentals and applications looks at the characteristics of these essential processes and natural materials and describes strategies and technologies to biomimetically design and produce biomaterials with improved biological performance. Provides a thorough overview of the biom mineralization process. Presents the most recent information on the natural process by which crystals in tissues form into inorganic structures such as bone, teeth and other natural mineralized tissues. Investigates methods for improving mineralization. Explores new techniques that will help improve the biomimetic process.

Biom mineralization Astrid Sigel, Helmut Sigel, Roland K. O. Sigel,2008-04-30 Biom mineralization is a hot topic in the area of materials and this volume in the Metals Ions in Life Sciences series takes a systematic approach dealing with all aspects from the fundamentals to applications. Key biological features of biom mineralization such as gene directed growth and the role of enzymes are covered as are new areas including copper zinc in the jaws of invertebrates or magnetic biomaterials that help birds with navigation.

Nano-Biomaterials for the Delivery of Therapeutic and Biological Cues for Regenerative Medicine Silvia Minardi, Hafiz M. N. Iqbal,2022-02-21 Modified Inorganic Surfaces as a Model for Hydroxyapatite Growth

Lilyana Pramatarova, Emilia Pecheva,2006-03-03 The process by which organisms in Nature create minerals is known as biom mineralization, a process that involves complex interactions between inorganic ions, crystals and organic molecules resulting in a controlled nucleation and growth of minerals from aqueous solutions. During the last few decades biom mineralization has been intensively studied due to its involvement in a wide range of biological events starting with the formation of bones, teeth, cartilage, shells, coral, so called physiological mineralization and encompassing pathological mineralization, i.e. the formation of kidney stones, dental calculi, osteoporosis, arteriosclerosis, osteogenesis imperfecta etc. During the same period biom mineralization has become a hot topic for world wide research throughout the world due to the growing expectations of a good quality and duration of life by the ever increasing population of the aged. Young people in particular also make increasing demands on the quality and the appearance of the existing implants available on the market.

The general goals of research and manufacture are now to create and improve implants for various applications in the human body as well as to prevent diseases leading to the formation of minerals such as hydroxyapatite implicated for example in osteogenesis kidney stones dental calculi arteriosclerosis all problems which mainly affect women The results presented in this book will make a significant contribution to the application of the modified surfaces of widely studied materials as a model system for hydroxyapatite coating to the cultivation of cells on surfaces as well as to the growth of hydroxyapatite by applying new technologies such as laser liquid solid interaction that facilitate nucleation and growth In this way materials and layers having possible applications as implants biosensors etc can be obtained The in vitro system described here is universal and can be applied not only to the production of hydroxyapatite coatings for implants but also to investigating the basic mechanisms of mineral formation diseases and thus identify new directions for prophylaxis This will then make a strong contribution to improving the quality and duration of life of the population Bioceramics Xingdong Zhang,2007
