Condominium Governance and Law in Global Urban Context Randy K. Lippert, Stefan Treffers, 2021-02-09. This book examines condominium property governance and law in international and conceptual perspective and reveals this urban realm as complex and mutating. Condominiums are proliferating the world over and transforming the socio spatial organization of cities and residential life. The collection assembles arguably the most prominent scholars in the world currently working in this broad area and situated in multiple disciplines including legal and socio legal studies, political science, public administration and sociology. Their analyses span condominium governance and law on five continents and in nine countries: the United States, US, China, Australia, the United Kingdom, UK, Canada, South Africa, Israel, Denmark, and Spain. Neglected issues and emerging trends related to condominium governance and law in cities from Tel Aviv to Chicago to Melbourne are discerned and analysed. The book pursues fresh empirical inquiries and cogent conceptual engagements regarding how condominiums are governed through law and other means. It includes accounts of a wide range of governance difficulties including chronic anti social owner behaviour, short term rentals, and even the COVID 19 pandemic and how they are being dealt with. By uncovering crucial cross national commonalities, the book reveals the global urban context of condominium governance and law as empirically rich and conceptually fruitful. The book will appeal to researchers and students in socio legal studies, law, sociology, political science, urban studies and public administration, as well as journalists, social activists, policymakers and condo owners/board members.

Building Technology Publications, 1984. Dimension Stone Use in Building Construction Kurt R. Hoigard, Michael J. Scheffler, 2007. Twelve peer reviewed papers demonstrate the continuing advancement in the understanding of dimension stone used in building construction. Topics cover: Strength Testing addresses testing to determine strength characteristics of dimension stone cladding panels. Design covers a wide range of topics including the advantages and disadvantages of three common dimension stone paving installation techniques, the relationships between stone material strength, anchorage strength and induced stress states for four common dimension stone cladding anchorage configurations, and more. Evaluation and Investigation provides observations regarding investigations into the causes of dimension stone cladding deterioration and failure. Durability discusses the complex issue of dimension stone durability using three different approaches: a large scale European research project to investigate the causes of marble and limestone cladding panel bowing, develop preconstruction testing parameters to assess bowing potential and assess proposed remedial efforts to reduce or inhibit ongoing bowing, and more.
