## **Classification Of Stars:**

Stellar Spectral Classification Richard O. Gray, Christopher J. Corbally, 2021-06-08 Written by leading experts in the field Stellar Spectral Classification is the only book to comprehensively discuss both the foundations and most up to date techniques of MK and other spectral classification systems Definitive and encyclopedic the book introduces the astrophysics of spectroscopy reviews the entire field of stellar astronomy and shows how the well tested methods of spectral classification are a powerful discovery tool for graduate students and researchers working in astronomy and astrophysics The book begins with a historical survey followed by chapters discussing the entire range of stellar phenomena from brown dwarfs to supernovae The authors account for advances in the field including the addition of the L and T dwarf classes the revision of the carbon star Wolf Rayet and white dwarf classification schemes and the application of neural nets to spectral classification Copious figures illustrate the morphology of stellar spectra and the book incorporates recent discoveries from earth based and satellite data Many examples of spectra are given in the red ultraviolet and infrared regions as well as in the traditional blue violet optical region all of which are useful for researchers identifying stellar and galactic spectra This essential reference includes a glossary handy appendixes and tables an index and a Web based resource of spectra In addition to the authors the contributors are Adam J Burgasser Margaret M Hanson J Davy Kirkpatrick and Nolan R Walborn

The Classification of Stars Carlos Jaschek, Mercedes Jaschek, 1990-07-26 The classification of stars into their various types is one of the fundamental areas of astronomy This book is a comprehensive handbook on the tools methods and results of stellar taxonomy Although this subject is firmly rooted in classical astronomy vast improvements in observational techniques have transformed the subject and greatly broadened the wavelength regions available for study The first six chapters describe modern methods of spectroscopic and photometric classification The remaining nine chapters describe particular families of stars progressing from the hottest to the coolest Within each category a description is given of the normal type and all the peculiar stars Throughout the emphasis is on the phenomenology of classification rather than the underlying astrophysics Both authors have devoted themselves to developing the international centre for stellar data at Strasbourg which uniquely qualifies them to write this definitive handbook for professional astronomers
