Classroom Applications of Microcomputers Robert V. Bullough, LaMond F. Beatty, 1991 Microcomputer Applications in the Classroom Alan M. Hofmeister, 1984-01-01 Microcomputer Applications in the Elementary Classroom George W. Bright, 1987-01-01 There is a serious risk that the extra burden of adding instruction about microcomputers and software to regular elementary school curricula may turn off both teachers and students to the potential that microcomputers have for improving learning To counter this risk microcomputers should be integrated into the regular instructional program of elementary schools This book is primarily intended for elementary school teachers who already have some experience with microcomputers but no expertise is assumed Following an introduction to education with computers many applications and issues are discussed including 1 programs for drill and practice 2 tutorials 3 games 4 simulations 5 computer error diagnosis 6 instructional software evaluation 7 programming 8 problem solving 9 word processing 10 computer literacy and 11 administrative uses of microcomputers This publication contains 109 references CW *Microcomputer Applications In Education And Training For Developing Countries* National Research Council (U.S.). Board on Science and Technology for International Development, 1987 Microcomputers and the Classroom Teacher Gail A. Caissy, 1987 This monograph for teachers addresses two emerging areas in the computing field providing inservice training in microcomputer use for the general teaching population and integrating the use of microcomputers into the overall curriculum A brief discussion of why computers should be used in the classroom introduces five chapters which provide overviews of the following topics 1 the use of computers in teaching and learning areas of computer use and using the computer as a teaching learning tool 2 types of software available for schools computer assisted instruction software applications software and databases 3 integrating computers into the classroom 4 developing a plan for using computers in the classroom setting up a classroom computer center and working with only one computer in the classroom and 5 evaluating educational software general questions questions about instructional design and questions about physical characteristics of the program A concluding statement argues that the key to continued growth and expansion in the educational computing field lies with classroom teachers and urges them to take an interest in computers and begin to use this important new tool in their classrooms A 71 item reference list concludes the document EW *Computers, Children, and Classrooms* Hilda W. different teachers were studied of these 5 teachers and 40 students were involved in the study for 2 years Classrooms had 1 to 5 computers over the entire school year or students had access to a computer laboratory Logo and word processing were studied extensively the use of a graphics tablet and Musicland were explored for short periods Findings indicate that the creative use of computers fosters the development of independent and original thinking and that an environment that encourages exploration leads to extensive social interaction among students in addition students become more willing to express refine or revise their ideas A significantly greater proportion of students experienced an increase in their confidence and self esteem if their teacher was able to give them autonomy over their learning The impact on students attention span and cognitive development in the special education classes was also significant Appendices and selected references are provided Author JB The Micro Goes to School Andria Troutman, James A. Futrell, 1990 Using Microcomputers in the Social Studies Classroom Robert B. Abelson, 1983 The purpose of this book is to help

teachers feel at ease with microcomputers so that they will begin to think of computers as tools that they themselves might use There are four chapters The first chapter provides basic information to help a user understand the computer Discussed are how the computer is put together and how it works To help teachers generate ideas about how this new educational aid might be useful in terms of their own teaching objectives the second chapter describes why and how other educators are using the computer Chapter 3 is an introduction to software evaluation i e how computer programs that are available for use in the classroom can be judged Criteria are presented It is suggested that teachers using computer assisted instruction should have a feel for some of the broader issues related to computers in education as well as practical knowledge The purpose of the fourth chapter which deals with social and educational issues and directions is to provide a perspective about these broader issues and a context into which teachers might place their own activities Most of the book s readings provide a bibliography of references and further resources In addition a list of resources available through the ERIC system is provided
