

Quantum Computing

Vs.

Classical Computing

Calculates with qubits, which can represent 0 and 1 at the same time

Calculates with transistors, which can represent either 0 or 1

Power increases exponentially in proportion to the number of qubits

Power increases in a 1:1 relationship with the number of transistors

Quantum computers have high error rates and need to be kept ultracold

Classical computers have low error rates and can operate at room temp

Well suited for tasks like optimization problems, data analysis, and simulations

Most everyday processing is best handled by classical computers
