Building Rules Kee Warner, Harvey Molotch, 2001-01-01 *Building Rules* Kee Warner, 2018-02-19 Urban and suburban growth is a burning local issue for communities across the United States and many other parts of the world Concerns include protecting habitats high costs of infrastructure social inequalities traffic congestion and more intangible worries about quality of life Citizens pressure public officials to intensify development regulations flying in the face of local growth machines Builders and growth boosters oppose regulation as unfair and bad for local economies Based on a systematic comparative study of urban areas in Southern California this book provides a much needed examination of the true impacts of local development controls including the ways that they have and have not made a difference The authors draw general implications for communities elsewhere and how to better understand theories of growth and urban governance *Taking Sustainable Cities Seriously* Kent E. Portney, 2002-11-22 Today at least twenty five major U S cities have pursued some form of sustainability initiative Although many case studies and how to manuals have been published there has been little systematic comparison of these cities programs and initiatives In this book Kent Portney lays the theoretical groundwork for research on what works and what does not and why Distinguishing cities on the basis of population characteristics and region for his analysis Portney shows how cities use the broad rubric of sustainability to achieve particular political ends Cities that take sustainability seriously such as Portland San Francisco and Seattle use broad definitions that go well beyond concern for the physical environment or creating jobs They pursue sustainability at many levels and integrate concern for economic development the environment and quality of life across all activities of city government Cities that take sustainability less seriously such as Cleveland Boston and Orlando confine it to such issues as solid waste disposal brownfields redevelopment and neighborhood beautification Still other cities such as New Haven Brownsville and Milwaukee do considerably less to work toward sustainability Portney begins by reviewing the conceptual underpinnings of sustainable development and sustainable communities The comparisons that follow provide a foundation for assessing the range of what is possible and desirable for sustainability initiatives In the book s conclusion Portney assesses the extent to which cities can use the pursuit of sustainability either to foster change in public values or merely to reinforce values that are already reflected in systems of governance *Custodians of Place* Paul George Lewis, Max Neiman, 2009 *Custodians of Place* provides a new theoretical framework that accounts for how different types of cities arrive at decisions about residential growth and economic development Lewis and Neiman surveyed officials in hundreds of California cities of all sizes and socioeconomic characteristics to account for differences in local development policies This book shows city governments at the center of the action in shaping their destinies frequently acting as far sighted trustees of their communities They explain how city governments often can insulate themselves for the better from short term political pressures and craft policy that builds on past growth experiences and future vision Findings also include how conditions on the ground local commute times

housing affordability composition of the local labor force play an important role in determining the approach a city takes toward growth and land use What types of cities tend to aggressively pursue industrial or retail firms What types of cities tend to favor housing over business development What motivates cities to try to slow residential growth Custodians of Place answers these and many other questions *Planning in the USA* J.
