species humans can learn and use language This book explains how the brain evolved to make language possible through
what Michael Arbib calls the Mirror System Hypothesis Because of mirror neurons monkeys chimps and humans can learn by
imitation but only complex imitation which humans exhibit is powerful enough to support the breakthrough to language This
theory provides a path from the openness of manual gesture which we share with nonhuman primates through the complex
imitation of manual skills pantomime protosign communication based on conventionalized manual gestures and finally to
protospeech The theory explains why we humans are as capable of learning sign languages as we are of learning to speak
This fascinating book shows how cultural evolution took over from biological evolution for the transition from protolanguage
to fully fledged languages The author explains how the brain mechanisms that made the original emergence of languages
possible perhaps 100 000 years ago are still operative today in the way children acquire language in the way that new sign
languages have emerged in recent decades and in the historical processes of language change on a time scale from decades
to centuries Though the subject is complex this book is highly readable providing all the necessary background in
primatology neuroscience and linguistics to make the book accessible to a general audience **Business Briefs** ,1930
