Upper Respiratory Infections and Environmental Conditions in a U.S. Navy Shipboard Population Edward D. Gorham, 1997

Two mechanisms of upper respiratory infection (URI) transmission have been described: 1) direct or fomite contact with self-inoculation and 2) transmission via aerosolized droplet nuclei. This study was undertaken to evaluate the relative contributions of these mechanisms in two populations living aboard Navy ships. A cross-sectional survey of URI symptoms was performed among 1,990 people living aboard 34 ships. Subjects completed questionnaires ascertaining symptoms during the previous 30 days and occupational and environmental conditions, including the number of occupants sharing sleeping compartments. A separate study was performed of 1,777 people who slept in 47 compartments aboard an aircraft carrier. This study used medical department diagnoses of URI and carbon dioxide measurements in sleeping compartments to assess ventilation. The 30-day period prevalence of URI symptoms aboard the 34 ships was 52% among men and 64% among women. The rate in current smokers was 18% higher than in never smokers. Individuals reporting dust exposure had 23% higher rates than those not exposed. Crew in the highest sleeping occupancy quartile (80 persons) had 31% higher rates than those in the lowest quartile (124 persons). This association persisted after adjustment for gender, age, race, type of ship, and occupational exposures. The mean carbon dioxide concentration in sleeping compartments aboard the aircraft carrier was 1,072 ppm. Incidence rates were not associated with population density or carbon dioxide level in sleeping compartments. URI incidence was 70% higher in compartments with high relative humidity. Results of the 34-ship study support previous research indicating the role of high sleeping space occupancy in URI spread. The aircraft carrier study did not support an association between URI incidence and high carbon dioxide concentration as a marker of poor ventilation and was not supportive of aerosolized droplet nuclei as a primary transmission mechanism in this setting. The association with high relative humidity is consistent with research demonstrating longer duration of virus survival in humid environments and supportive of fomite transmission with self-inoculation. The occurrence of epidemics following two port visits supports an epidemic model of URI transmission from port populations to susceptible individuals aboard ship.

Hospital Nursing, 1964 **Infection Control & Management of Hazardous Materials for the Dental Team** Chris H. Miller, Charles John Palenik, 2005 This comprehensive text addresses the issues of controlling the spread of disease agents and maintaining safety in the dental office. It emphasizes the basic concepts of infectious disease and the actual practice of infection control and describes the specific procedures used and the supplies and equipment needed for disease prevention and office safety. Written at a level appropriate for the entire dental team, the book reflects the new legislation passed for the protection of dental patients and dental workers and shows how these mandates have changed the way dental care is provided. Logical organization of topics allows better comprehension and enhanced readability. The inclusion of tables, boxes, and illustrations helps to reinforce important information. Microbiology and other basic topics are covered with descriptions of bacteria, viruses, and fungi, and the development of infectious diseases, oral microbial diseases, and bloodborne disease agents. Bloodborne pathogens are discussed, including hepatitis, HIV, and tuberculosis. The text addresses how diseases are spread and how the spread of disease can be prevented. Detailed information is provided on office management, including the office safety program, how to manage chemicals, and how to prepare and implement a fire emergency action plan. Content has been updated to reflect new laws, regulations, and procedures. Two completely new chapters have been added: About the Occupational Safety and Health Administration (OSHA) and Infection control concerns during remodeling construction. More step-by-step procedure boxes are featured, giving detailed instructions on how to perform procedures such as instrument processing, following up on a sterilization failure, and the use of surface covers. Appendix C: CDC guidelines for infection control in dental health care settings, 2003, reflects the most up-to-date information available. Added is Appendix G on the Health Insurance Portability and Accountability Act (HIPAA) of 1996. Review questions are added at the end of each chapter with answers in the back of the book. A detailed outline is now included at the beginning of each chapter. Key terms are included at the beginning of each chapter and bolded upon first mention. New illustrations and a two-color design have been added. The APIC/JCAHO Infection Control Workbook Joint Commission Resources, Inc, 2006
