Bodies And Machines:

Bodies and Machines (Routledge Revivals) Mark Seltzer, 2014-11-13 *Bodies and Machines* is a striking and persuasive examination of the body machine complex and its effects on the modern American cultural imagination. *Bodies and Machines* first published in 1992 explores the links between techniques of representation and social and scientific technologies of power in a wide range of realist and naturalist discourses and practices. Seltzer draws on realist and naturalist writing such as the work of Hawthorne and Henry James and the discourses which inform it from scouting manuals and the programmes of systematic management to accounts of sexual biology and the rituals of consumer culture. He explores other mass produced and mass consumed cultural forms including visual representations such as composite photographs, scale models and the astonishing iconography of standardization. *Bodies and Machines* Mark Seltzer, 1992

Through a critical analysis of the widely accepted notion that technology speeds everything up, this book argues that there are only ever differences in speed. The question for us is how can such differences be represented. *Bodies/Machines* Iwan Rhys Morus, 2002-12-01 It is hard to believe that the pursuit of artificial intelligence is not a phenomenon of the twentieth century. For over three hundred years the boundaries between bodies and machines, the natural and the artificial, the animate and the inanimate have been passionately explored. These explorations beginning in the seventeenth and eighteenth and increasing during the nineteenth century have been all but forgotten, lost beneath the commotion of the modern day world. This book retrieves these lost histories, giving voice to the hopes, dreams and fears of philosophers, medical practitioners, engineers, craftsmen and artisans who have all been fascinated by the interface between bodies and machines. The journey back in time unfolds with the mysterious advent of mechanical philosophies which conceptualized the body and the surrounding world largely in terms of mechanistic interactions. These theories develop in intriguing directions and fuel experiments in such areas as material production and social punishment, spiritualism and mental health. From reanimating dead bodies with electricity which led to the introduction of the electric chair through to the use of machines to render hysterics and the insane fit for reintroduction into society, this book conveys the dark truths behind our relationship with machines. This book is not only an exceptional

contribution to the history of technology but also to contemporary debates about humans and machines

Manifesting Medicine Robert Bud, Bernard S. Finn, Helmuth Trischler, 1999 Increasingly historians museum curators are using technological artifacts as expressions of human culture Reflecting the broad scope of interaction between science technology society they can help us see not just machines but also imaginative worlds of the past Building on this growing interest three of the world's greatest depositories of material heritage in the history of technology the Deutsches Museum in Munich the Science Museum in London the Smithsonian Institution in Washington are cooperating in the new series of publications which explores the use of objects as resources in the study of the history of science technology medicine Each volume will examine a wide range of uses of objects but will focus on a particular area of study With its focus on modern technology **Manifesting Medicine** is a history of medicine with a difference The authors have striven to show that those who today encounter the artifacts of this book in its pages even perhaps in the flesh will be confronting big subjects blood life danger conception All those interested in how medicine affects the culture of the healthy well as the fate of the sick will find this volume of interest

Minds, Bodies, Machines, 1770-1930 D. Coleman, H. Fraser, 2011-04-11 It is during the nineteenth century the age of machinery that we begin to witness a sustained exploration of the literal and discursive entanglements of minds bodies machines This book explores the impact of technology upon conceptions of language consciousness human cognition and the boundaries between materialist and esoteric sciences

Sex, Machines and Navels Fred Botting, 1999 This work offers a critical re-reading of fictions of humanity history technology and postmodern culture Taking psychoanalysis into cyberspace the book develops an theoretical perspective on the relationship with bodies and machines to offer a focused re-examination of the notions of desire metaphor sexed identity and difference and the process of technological transformation
