*Growth, Maturation, and Body Composition* Alex F. Roche, 1992-08-27 Growth Maturation and Body Composition documents one of the most remarkable and significant studies in the field of human biology The Fels Longitudinal Study is the longest largest and most productive serial study of human growth maturation and body composition This book shows how data collected from more than 1000 participants during the past 60 years have been analysed to test a wide range of hypotheses and describes how the findings have led to the development of improved research methods Topics covered include the management and analysis of data prenatal familial and genetic studies physical growth development and maturation bones and teeth body composition and risk factors for cardiovascular disease With more than 1000 specialized publications of Fels data the present book provides a unique overview of this fascinating research programme which will be of interest to a wide range of researchers including those in the fields of physical anthropology nutrition science pediatrics gerontology epidemiology endocrinology human genetics as well as statistics

**Metabolism and Artificial Nutrition in the Critically Ill** G. Guarnieri, F. Iscra, 2012-12-06 The critically ill patient in intensive care may present with serious metabolic alterations caused directly by the illness or secondarily by complications e g infections organ failure or sepsis developing within a few hours of hospitalization or in the following days Among the situations which maintain and further trigger

rapidly evolving altered metabolism are complex hormonal reactions particularly those of the hypothalamus hypophysis adrenal axis and abnormal stimulation of the autonomic nervous system In fact the sympathetic nervous system is known to cause significant metabolic alterations For example a surgery patient afflicted by septic complications may become hypercatabolic and experience significant nitrogen loss the altered protein metabolism may in turn heavily influence carbohydrate and lipid metabolism as well Thus it is apparent that for optimal care of patients with altered metabolic functions further knowledge is necessary regarding the physiopathology of metabolism and the physiopathological mechanisms which alter the consumption of principal energy substrates Many experimental and clinical studies have investigated the metabolic aspects of individual organs or organ systems However for a correct evaluation of such metabolic events in addition to studying the roles of metabolic enzymes active metabolites and the glutathione system it is interesting to consider the use of indirect calorimetry as a valid and important investigative technique The critically ill patient with major alterations in nutritional status may require artificial nutritive support administered through either parenteral or enteral routes

*Variability in Human Fertility* Lyliane Rosetta, C. G. Nicholas Mascie-Taylor, 1996-08-28 It is widely believed that reproductive cycles are very similar between human females However there are in fact considerable variations both between individuals and within the reproductive life of any given individual Normal reproductive cycles cover a wide range of eventualities and the likelihood of successful monthly egg release and ensuing pregnancy can be modified by a large number of factors In this book the variability of human fertility is examined by first looking at the physiological processes regulating reproduction and the roles of metabolic adaptation and metabolic load Inter population variation in normal ovarian function is then discussed covering the importance of factors such as age disease and breastfeeding in modifying ovarian function First published in 1996 this is an important book for all those interested in human fertility

*Primate Behaviour* Duane Quiatt, Vernon Reynolds, 1995-01-27 Stressing direct connections between human and nonhuman society this book about the social life of monkeys apes and humans emphasizes the importance of social information and knowledge in the understanding of primate behavior and organization

*The Evolutionary Biology of Human Body Fatness* Jonathan C. K. Wells, 2009-11-26 This comprehensive synthesis of current medical and evolutionary literature addresses key questions about the role body fat plays in human biology It explores how body energy stores are regulated how they develop over the life course what biological functions they serve and how they may have evolved There is now substantial evidence that human adiposity is not merely a buffer against the threat of starvation but is also a resource for meeting the energy costs of growth reproduction and immune function As such it may be considered as important in our species evolution as other traits such as bipedalism large brains and long life spans and developmental periods Indeed adiposity is integrally linked with these other traits and with our capacity to colonise and inhabit diverse ecosystems It is because human metabolism is so sensitive to environmental cues that manipulative economic forces are now generating the current obesity epidemic

**Genetic**

**Variation and Human Disease** Kenneth M. Weiss,1993 Recent developments in molecular and computational methods have made it possible to identify the genetic basis of any biological trait and have led to spectacular advances in the study of human disease This book provides an overview of the concepts and methods needed to understand the genetic basis of biological traits including disease in humans Using examples of qualitative and quantitative phenotypes Professor Weiss shows how genetic variation may be quantified and how relationships between genotype and phenotype may be inferred This book will appeal to many biologists and biological anthropologists interested in the genetic basis of biological traits as well as to epidemiologists biomedical scientists human geneticists and molecular biologists

**The Health Consequences of 'Modernisation'** Roy J. Shephard,Andris Rode,1996-02-23 What are the health consequences of a transition from an active hunter gatherer lifestyle to that of sedentary modern living In this book the impact of modernization is assessed in various populations in the circumpolar regions The hazards of living in polar regions and the adaptations shown culturally behaviourally and physically by the indigenous peoples are examined and the effect of changes in habitual activity diet and general lifestyle due to more urban living patterns on the body composition pulmonary function and susceptibility to disease discussed The implications of this switch are important not only for all those concerned about the survival of indigenous communities around the world but for all of us living in an increasingly sedentary urban environment Anthropologists physiologists and those interested in population fitness will find this a comprehensive and valuable volume
