**The Body Electric** James Geary, 2002 Marie a sixty three year old Belgian woman has been totally blind since the age of fifty seven But now thanks to electrodes implanted around her right optic nerve she can see lights shapes and colors again Marie is one of a handful of people around the world who have had computer chips implanted in their bodies to extend enhance or repair their senses The idea of actually melding man and machine still seems futuristic unlikely and a little scary But in *The Body Electric* James Geary examines the startling possibilities opened up by the merger of the biological and the technological This remarkable convergence holds the promise of restoring sight to the blind and mobility to the paralyzed It might also provide us with bionic senses such as the ability to see infrared radiation or feel objects at a distance By linking neurons in the brain directly to silicon chips scientists are also exploring the possibility of creating virtual eyes ears and limbs on the Internet and allowing people to control appliances by thought alone Machines too are getting silicon senses Researchers are endowing computers with the ability to see hear smell taste touch and conceivably think *The Body Electric* offers an accessible and astute survey of this exciting area of research with its potential commercial medical and military applications Drawing on fields as diverse as artificial intelligence and biology *The Body Electric* asks Are you any less you after a bionic implant If all of our senses are electronically enhanced how will we tell the difference between virtual reality and the actual world Will it matter The merger of our technology and ourselves is already beginning to change the way we see hear smell taste touch and think about the world opening the doors of perception just another crack *The Sensory Studies Manifesto* David Howes, 2022-08-31 The senses are made not given This revolutionary realization has come as of late to inform research across the social sciences and humanities and is currently inspiring groundbreaking experimentation in the world of art and design where the focus is now on mixing and manipulating the senses *The Sensory Studies Manifesto* tracks these transformations and opens multiple lines of investigation into the diverse ways in which human beings sense and make sense of the world This unique volume treats the human sensorium as a dynamic whole that is best approached from historical anthropological geographic and sociological perspectives In doing so it has altered our understanding of sense perception by directing attention to the sociality of sensation and the cultural mediation of sense experience and expression David Howes challenges the assumptions of mainstream Western psychology by foregrounding the agency interactivity creativity and wisdom of the senses as shaped by culture *The Sensory Studies Manifesto* sets the stage for a radical reorientation of research in the human sciences and artistic practice *The Technocene* Hermínio Martins, 2018-12-15 Herm nio Martins was one of the key pioneers of the sociology of science and technology He published extensively in Portuguese and was recognized for his academic contributions with an honorary doctorate at Lisbon 2006 and two Portuguese Medals of Honour Following his retirement from the University of Oxford he wrote prolifically in English on a wide range of topics that examined the ethical and societal consequences of the commoditization of the human body and

mind These essays are deep philosophical reflections on our contemporary world and draw extensively and eclectically upon a wide range of theoretical influences including continental philosophy history and psychology to name but a few disciplines The Technocene is a selection of some of these insightful essays made available to a global audience for the first time

**Sense-Making** Sheryl Boyle, Genevieve Collins, David Howes, 2025-08-22 In this highly innovative work the senses are liberated from the confines of the present to serve as vehicles for accessing other historical periods and imagined futures Sense Making builds on the burgeoning field of sensory ethnography by introducing a pair of methodologies sensory reconstruction and sensorial extrapolation expressly devised to facilitate time travel The first part offers a survey and critique of extant work in sensory archeology and sensory futures The second part presents a case study of sensory reconstruction in action focusing on Thornbury Castle 1508 1521 in the UK The third part probes the life of the senses on the final frontier the next habitat of humanity namely outer space These sensory case studies are not purely architectural or purely futuristic They are at the same time exercises in arts based practice or research creation where the authors do not just carry out bibliographic research and write about pasts and futures they make them Sense Making is necessary reading for the international community of sensory studies scholars as well as those with interests spanning material culture museum and heritage studies visual and auditory culture experimental psychology design and digital technology SENSE THINK ACT

Stefan Szczelkun, 2018-03-03 *Make Way for the Superhumans* Michael Bess, 2016-07-07 Biomedical research is changing the both the format and the functions of human beings Very soon the human race will be faced with a choice do we join in with the enhancement or not Make Way for the Superhumans looks at how far this technology has come and what aims and ambitions it has From robotic implants that restore sight to the blind to performance enhancing drugs that build muscles improve concentration and maintain erections bio enhancement has already made massive advances Humans have already developed the technology to transmit thoughts and actions brain to brain using only a computer interface By the time our grandchildren are born they will be presented with the option to significantly alter and redesign their bodies Make Way for the Superhumans is the only book that poses the questions that need answering now suggesting real practical ways of dealing with this technology before it reaches a point where it can no longer be controlled *Our Grandchildren Redesigned*

Michael Bess, 2016-09-06 A panoramic overview of biotechnologies that can endlessly boost human capabilities and the drastic changes these superhuman traits could trigger Biotechnology is moving fast In the coming decades advanced pharmaceuticals bioelectronics and genetic interventions will be used not only to heal the sick but to boost human physical and mental performance to unprecedented levels People will have access to pills that make them stronger and faster informatic devices will interface seamlessly with the human brain and epigenetic modification may allow people to reshape their own physical and mental identities at will Until recently such major technological watersheds like the development of metal tools or the industrialization of manufacturing came about incrementally over centuries or longer People and social

systems had time to adapt they gradually developed new values norms and habits to accommodate the transformed material conditions But contemporary society is dangerously unprepared for the dramatic changes it is about to experience down this road on which it is already advancing at an accelerating pace The results will no doubt be mixed People will live longer healthier lives will fine tune their own thought processes and will generate staggeringly complex and subtle forms of knowledge and insight But these technologies also threaten to widen the rift between rich and poor to generate new forms of social and economic division and to force people to engage in constant cycles of upgrades and boosts merely to keep up Individuals who boost their traits beyond a certain threshold may acquire such extreme capabilities that they will no longer be recognized as unambiguously human In this important and timely book prize winning historian Michael Bess provides a clear nontechnical overview of cutting edge biotechnology and paints a vivid portrait of a near future society in which bioenhancement has become a part of everyday life He surveys the ethical questions raised by the enhancement enterprise and explores the space for human agency in dealing with the challenges that these technologies will present Headed your way over the coming decades new biotechnologies that can powerfully alter your body and mind The possibilities are tantalizing Rejuvenation therapies offering much longer lives 160 and even beyond in full vigor and mental acuity Cognitive enhancement through chemical or bioelectronic means the rough equivalent of doubling or tripling IQ scores Epigenetic tools for altering some of your genetically influenced traits at any point in your lifetime body shape athletic ability intelligence personality Bioelectronic devices for modulating your own brain processes including your pleasure centers a potentially non stop high Direct control of machines by thought and perhaps direct communication with other people brain to brain a new dimension of sharing and intimacy But some of the potential consequences are also alarming A growing rift between the biologically enhanced and those who can t afford such modifications A constant cycle of upgrades and boosts as the bar of normal rises ever higher Humans 95 Humans XP Humans 8 The fragmentation of humankind into rival bioenhancement clusters A gradually blurring boundary between person and product Extreme forms of self modification with some individuals no longer recognized as unambiguously human
