Bold Science Seven Scientists Who Are Changing Our World:

Bold Science Ted Anton, 2000 Examines scientific breakthroughs and innovations through profiles of seven scientists including neuroscientist Susan Greenfield astronomer Geoffrey Marcy and immunologist Polly Matzinger **Science without Boundaries** Willy Ostreng, 2009-12-21 *Science without Boundaries* discusses the many issues involved in going beyond disciplinary research practices in science politics and society and addresses the complexities of their interface Governments and politicians are increasingly calling upon the scientific community to deal with global challenges such as climate change poverty international governance peace making et cetera These are calls for interdisciplinary research calls to deal with the interaction of parts in complex systems The book addresses questions like these Does interdisciplinary research fit into the overall disciplinary organization of the sciences Does interdisciplinary research meet the high scientific standards of the research community How does the science community adopt to changing circumstances How responsive is the science community to social and political needs To what extent do governments intervene to influence science What pattern of interaction exists between politics society and research Polar research is used to show how politics may intermingle with science to safeguard national interests in times of dramatic international change *Planet of Microbes* Ted Anton, 2017-10-31 We live in a time of unprecedented scientific knowledge about the origins of life on Earth But if we want to grasp the big picture we have to start small very small That's because the real heroes of the story of life on Earth are microbes the tiny living organisms we cannot see with the naked eye Microbes were Earth's first lifeforms early anaerobic inhabitants that created the air we breathe Today they live invisible and seemingly invincible in every corner of the planet from Yellowstone's scalding hot springs to Antarctic mountaintops to inside our very bodies more than a hundred trillion of them Don't be alarmed though many microbes are allies in achieving our to say nothing of our planet's health In *Planet of Microbes* Ted Anton takes readers through the most recent discoveries about microbes revealing their unexpected potential to reshape the future of the planet For years we knew little about these invisible invaders considering them as little more than our enemies in our fight against infectious disease But the more we learn about microbes the more it's become clear that our very lives depend on them They may also hold the answers to some of science's most pressing problems including how to combat a warming planet clean up the environment and help the body fight off a wide variety of diseases Anton has spent years interviewing and working with the determined scientists who hope to harness the work of microbes and he breaks down the science while also sharing incredible behind the scenes stories of the research taking place everywhere from microbreweries to Mars The world's tiniest organisms were here more than three billion years before us We live in their world and *Planet of Microbes* at last gives these unsung heroes the recognition they deserve **A to Z of Biologists** Lisa Yount, 2014-05-14 Profiles more than 150 scientists from around the world who made important contributions to the field of biology including Claude Bernard Alexander Fleming Mary Claire King Ronald Ross and Tetsuko Takabe **The Five**

Biggest Unsolved Problems in Science Arthur W. Wiggins, Charles M. Wynn, 2003-09-12 An in depth look at the most intriguing puzzles in science today In this illuminating book professors Arthur Wiggins and Charles Wynn explore what they believe are the five biggest science problems Physics Why do some particles have mass while others have none Chemistry By what series of chemical reactions did atoms form the first living things Biology What is the complete structure and function of the proteome Geology Is accurate long range weather forecasting possible Astronomy Why is the universe expanding faster and faster Wiggins and Wynn carefully explain each of these problems then discuss the theories that address them Some of the many topics covered include string theory the human genome chaos theory and protein folding Featuring humorous illustrations from renowned science cartoonist Sidney Harris this book invites you to explore the events that led to these problems and the cutting edge efforts being made to solve them The authors also provide Idea Folders which contain additional details about the unsolved problems and Resources for Digging Deeper such as books periodicals and Web sites
