**Butterflies of Australia** Michael F Braby, 2000-08-15 This outstanding work is the ultimate guide for the identification of Australia's butterflies. Nearly 400 species, all those currently recognised from Australia plus those from surrounding islands, are represented with all adults and some immature stages displayed in stunning colour sections. Introductory chapters cover the history of publications, classification, morphology, distribution, conservation and collection, together with a checklist of the butterfly fauna. The body of the text is arranged systematically, providing a wealth of information including description, variation, similar behaviour, distribution and habitat, and major literature references, giving a comprehensive summary of the present state of knowledge of these insects. Appendices provide details of those species recorded from Australian islands outside the Australian faunal subregion, those protected by legislation, the larval food plants and the attendant ants. Extensive references, a glossary and an index of scientific and common names complete the work. Joint Winner of the 2001 Whitley Medal, Finalist, Scholarly Reference section, The Australian Awards for Excellence in Educational Publishing, 2001.

*Butterflies of Australia* Michael F. Braby, 2000 Guide for the identification of nearly 400 butterfly species recognised from Australia and surrounding islands. It includes information on their biology, behaviour and distribution, as well as providing a summary of the present state of knowledge of these insects. Suited to tertiary students, professionals and butterfly enthusiasts.

All about Butterflies of Australia Garry Sankowsky, 2015 This new title investigates the always popular subject of Australian butterflies. Early chapters explore the lifecycle of these majestic insects with stunning images showing the progression from egg through caterpillar and chrysalis stages to adult butterfly. It also covers subjects such as defence mechanisms, camouflage, mimicry, etc. feeding and introduced species. A large section of the book includes identification spreads on key species and families of Australian butterflies. Many of the country's most eye-catching species are covered, including White Nymph, Common Jezabel, Ulysses Butterfly and the gigantic Cairns Birdwing. For many species, all stages of the lifecycle are illustrated with images of eggs, caterpillars at various stages of development and chrysalises, together with male and female butterflies where they differ significantly in appearance. Another very useful feature is the quick comparison guides to similar species, including many of those in the Brown and Blue families. Full of 300 full colour images taken from the author's own collection, which he has built up over many decades, a beautifully presented book, the ideal gift for anyone with an interest in the wonderful lives of butterflies.

*Lepidoptera* E. D. Edwards, J. Newland, Australian Biological Resources Study, L. Regan, 2001 Certificate of Commendation Winner at the 2001 Whitley Awards, Best Zoological Reference Section. This very detailed compendium of data on taxonomy and nomenclature of Australian butterflies is another in the Catalogue series produced by the Australian Biological Resources Study, a sub

program of Environment Australia Expanding on the butterfly section of the earlier Checklist of the Lepidoptera of Australia by Nielsen Edwards Rangsi 1996 This Catalogue contains the fine details of naming and status of types of Australian butterflies and information critical for fixing the scientific names of the species This volume is the Who's Who for the Australian butterfly fauna the very basic information we all need but find so difficult to access and evaluate for ourselves It is introduced by a comprehensive historical and explanatory account of work on Australian butterflies Details are given of all genus and species synonymies applicable to the Australian fauna There are details of the type designations of all 507 available generic names of type data for the 1 004 available species group names and of nomenclatural changes and changes in taxonomic status for most of the 136 valid genera 400 species and 371 subspecies The butterflies have an enormous literature and this catalogue provides a guide to the significant literature of each taxon An extensive list of larval food plants is also included as well as succinct information on ecology and distribution and a comprehensive bibliography Features *A Field Guide to Butterflies of Australia* Garry Sankowsky, 2022-11 A comprehensive guide to the country's butterflies covering everything from the eye catching Common Jezabel and Ulysses Butterfly to the gigantic Cairns Birdwing to the more cryptic Blues and Skippers The key features that separate this book from all other butterfly field guides are firstly that all the images are of live butterflies compared with other guides which often use specimens and secondly that there are large numbers of images documenting the different life stages egg caterpillar chrysalis etc plus images of male and female butterflies where they differ significantly in appearance and also pictures of host plants which are often an important factor in locating the butterflies On average each of the 350 butterfly species included have one page of coverage although some of the larger and more well known species have up to three pages and some of the smaller species are set at two or three species to a page There is a distribution map for each species The sturdy plastic cover and compact layout make the book ideal for use in the field while the target readership is anyone with an interest in butterflies
