

Large Language Models

Large language models are deep neural networks that are trained on vast amounts of text data to generate natural language text. They can perform various NLP tasks such as text classification, translation, question answering, and text generation. Examples include GPT-3 by OpenAI, BERT by Google, and RoBERTa by Facebook. These models have hundreds of millions to billions of parameters, making them capable of understanding and generating human-like text.

An Experimental Evaluation of the Radiation Protection Afforded by a Large Modern Concrete Office Building J. F. Batter, A. L. Kaplan, E. T. Clarke, 1959 An experimental study was made to determine the effective shielding provided by a modern reinforced concrete office building AEC Headquarters building from nuclear fallout Pocket ionization chambers were used for measurement of the radiation field strength Fallout was simulated with distributed and point source configurations of Co 60 and Ir 192 sources Four typical sections were selected for study and experiments were performed on each These included an external wing with exposed basement walls and an external wing with a buried basement Roof studies were made on an internal wing with a full basement and on the east end of wing A which has a thin roof construction The thick roof construction of 8 in of concrete and 2 in of rigid insulation covers all the building except the east end of wing A which has 4 in of concrete and 2 in of insulation

Effects of Compressibility and Large Angles of Yaw on Pressure Indicated by a Total-pressure Tube Milton D. Humphreys, 1945 Summary The effects of compressibility and angle of yaw on the pressure measured by a round nose and a flat nose total pressure tube have been investigated The tests were conducted in the Langley rectangular high speed tunnel at Mach numbers from 0.3 to 0.9 for angles of yaw from 0 to 180 The results indicated that no error was incurred in the measurement of total pressure by either tube for angles of yaw from 0 to 10 in the Mach number range investigated At constant Mach numbers the round nose tube had a linear variation of total pressure error with angle of yaw at angles ranging from 50 to 70 This characteristic is desirable in yaw heads of the Y type The flat nose tube had a nonlinear variation of total pressure error with angle of yaw in this range
