Reussner,2008-10-10 On behalf of the Organizing Committee we are pleased to present the proceedings of the 2008 Symposium on Component Based Software Engineering CBSE CBSE is concerned with the development of software intensivesystems from independently developed software building blocks components the velopment of components and system maintenance and improvement by means of component replacement and customization CBSE 2008 was the 11th in a series of events that promote a science and technology foundation for achieving predictable quality in software systems through the use of software component technology and its associated software engineering practices Wewerefortunateto

have dedicated Program Committee comprising many internationally recognized researchers and industrial practitioners. We would like to thank the members of the Program Committee and associated reviewers for their contribution in making this conference a success. We received 70 submissions and each paper was reviewed by at least three Program Committee members, four for papers with an author on the Program Committee. The entire reviewing process was supported by the Conference Management Toolkit provided by Microsoft. In total, 20 submissions were accepted as full papers and 3 submissions were accepted as short papers.

Component-Based Software Engineering Grace A. Lewis, Iman Poernomo, Christine Hofmeister, 2009-06-18. The 2009 Symposium on Component Based Software Engineering (CBSE 2009) was the 12th in a series of successful events that have grown into the main forum for industrial and academic experts to discuss component technology. Component based software engineering (CBSE) has emerged as the underlying technology for the assembly of executable software systems. In essence, CBSE is about composing computational building blocks to construct larger building blocks that fulfill client needs. Most software engineers are involved in some form of component based development. Nonetheless, the implications of CBSE adoption are wide reaching and its challenges grow in tandem with its uptake, continuing to inspire our scientific speculation. Component based development necessarily involves elements of software architecture, modular software design, software verification, testing, conformance and deployment. This year's submissions represent a cross section of CBSE research that touches upon all these aspects. The theoretical foundations of component specification, composition, analysis, and verification continue to pose research challenges. What exactly constitutes an adequate semantics for communication and composition so that bigger things can be built from smaller things? How can formal approaches facilitate predictable assembly through better analysis? We have grouped the proceedings into two sub themes that deal with these issues: component models and communication and composition. At the same time, the world is changing.

Component-Based Software Engineering Michel R. V. Chaudron, Clemens Szyperski, Ralf Reussner, 2008-10-06. This book constitutes the refereed proceedings of the 11th International ACM SIGSOFT Symposium on Component Based Software Engineering (CBSE 2008) held in Karlsruhe, Germany, in October 2008. The 20 revised full papers and 3 short papers presented were carefully reviewed and selected from 70 submissions. The papers feature new trends in global software services and distributed systems architectures to push the limits of established and tested component based methods, tools, and platforms. The papers are organized in topical sections on performance engineering, extra-functional properties, security and energy, formal methods and model checking, verification techniques, run-time infrastructures, methods of design and development, component models.
