**Current Topics in Cellular Regulation** Bernard L. Horecker, Earl R. Stadtman, 2014-06-28 Current Topics in Cellular Regulation Volume 25 is a collection of papers that deals with GTP the central regulator of cellular anabolism and the quantitative approach to metabolic control Other papers describe the inactivation and aldolases by limited proteolysis by lysosomal cathepsin M the regulatory functions of proline pyrroline 5 carboxylic acid as well as the characteristics of a hormonal regulation of amino acid transport One paper suggests that GTP possibly acting through high guanine nucleotide energy charge acts to stimulate a wide variety of anabolic processes involved in cell growth or proliferation Another paper proposes that lysosomes are responsible for the degradation of proteins and other macromolecules and in regulating cytosolic enzymes This action is due to the presence of selected proteinases located on the outer lysosomal surface that are active at neutral pH and also which catalyze only limited proteolysis of cytosolic proteins One paper describes the characteristics and hormonal regulation of a specific transport system for neutral amino acids namely the System A mediated transport The collection can prove beneficial for biochemists micro biologists bio physicists cellular researchers and academicians involved in the study of cellular biology **Books in Print Supplement** ,1994 **Principles of Metabolic Control in Mammalian Systems** Herman, 2013-11-11 In this work we present the basic principles of metabolic control which we hope will serve as a foundation for the vast array of factual matter which the biochemist and the physician engaged in metabolic research must accumulate Accordingly we attempt to set forth these principles along with sufficient explanation so that the reader may apply them to the ever expanding literature of biochemistry If we are successful this will provide a theoretical approach which can be applied to any given set of metabolic reactions It is impossible to enumerate each and every biochemical reaction and pathway since such a work would be too unwieldy for efficient use Rather we hope our presentation of the principles of metabolic control will be sufficiently basic to be of lasting usefulness no matter how detailed biochemistry may become We would like to be able to condense biochemistry into a theoretical biology that will not only allow for the general treatment of any given reaction but will enable predictions to be made as to the existence of necessary pathways and the consequences of altered control Such is not possible today but this may be accomplished in the future We believe it is now possible to institute the beginnings of such a theoretical biology *National Cancer Institute Monograph* ,1973 **Catalog of Copyright Entries.
