Curves Singularity:

Singularities of Plane Curves Eduardo Casas-Alvero, 2000-08-31 Comprehensive and self contained exposition of singularities of plane curves including new previously unpublished results

Curves and Singularities James William Bruce, P. J. Giblin, 1992-11-26 This second edition is an invaluable textbook for anyone who would like an introduction to the modern theories of catastrophes and singularities

On the Resolution of Higher Singularities of Algebraic Curves Into Ordinary Nodes Buz M. Walker, 1906

Singular Algebraic Curves Gert-Martin Greuel, Christoph Lossen, Eugenii Shustin, 2018-12-30 Singular algebraic curves have been in the focus of study in algebraic geometry from the very beginning and till now remain a subject of an active research related to many modern developments in algebraic geometry symplectic geometry and tropical geometry The monograph suggests a unified approach to the geometry of singular algebraic curves on algebraic surfaces and their families which applies to arbitrary singularities allows one to treat all main questions concerning the geometry of equisingular families of curves and finally leads to results which can be viewed as the best possible in a reasonable sense Various methods of the cohomology vanishing theory as well as the patchworking construction with its modifications will be of a special interest for experts in algebraic geometry and singularity theory The introductory chapters on zero dimensional schemes and global deformation theory can well serve as a material for special courses and seminars for graduate and post graduate students Geometry in general plays a leading role in modern mathematics and algebraic geometry is the most advanced area of research in geometry In turn algebraic curves for more than one century have been the central subject of algebraic geometry both in fundamental theoretic questions and in applications to other fields of mathematics and mathematical physics Particularly the local and global study of singular algebraic curves involves a variety of methods and deep ideas from geometry analysis algebra combinatorics and suggests a number of hard classical and newly appeared problems which inspire further development in this research area

Differential Geometry Of Curves And Surfaces With Singularities Masaaki Umehara, Kentaro Saji, Kotaro Yamada, 2021-11-29 This book provides a unique and highly accessible approach to singularity theory from the perspective of differential geometry of curves and surfaces It is written by three leading experts on the interplay between two important fields singularity theory and differential geometry The book introduces singularities and their recognition theorems and describes their applications to geometry and topology restricting the objects of attention to singularities of plane curves and surfaces in the Euclidean 3 space In particular by presenting the singular curvature which originated through research by the authors the Gauss Bonnet theorem for surfaces is generalized to those with singularities The Gauss Bonnet theorem is intrinsic in nature that is it is a theorem not only for surfaces but also for 2 dimensional Riemannian manifolds The book also elucidates the notion of Riemannian manifolds with singularities These topics as well as elementary descriptions of proofs of the recognition theorems cannot be found in other books Explicit examples and models are provided in abundance along with insightful explanations of the underlying theory as

well Numerous figures and exercise problems are given becoming strong aids in developing an understanding of the material Readers will gain from this text a unique introduction to the singularities of curves and surfaces from the viewpoint of differential geometry and it will be a useful guide for students and researchers interested in this subject

Resolution of Curve and Surface Singularities in Characteristic Zero K. Kiyek, José Luis Vicente Córdoba, 2004-10 This book covers the beautiful theory of resolutions of surface singularities in characteristic zero The primary goal is to present in detail and for the first time in one volume two proofs for the existence of such resolutions One construction was introduced by H W E Jung and another is due to O Zariski Jung s approach uses quasi ordinary singularities and an explicit study of specific surfaces in affine three space In particular a new proof of the Jung Abhyankar theorem is given via ramification theory Zariski s method as presented involves repeated normalisation and blowing up points It also uses the uniformization of zero dimensional valuations of function fields in two variables for which a complete proof is given Despite the intention to serve graduate students and researchers of Commutative Algebra and Algebraic Geometry a basic knowledge on these topics is necessary only This is obtained by a thorough introduction of the needed algebraic tools in the two appendices

Singular Points of Plane Curves C. T. C. Wall, 2004-11-15 Even the simplest singularities of planar curves e g where the curve crosses itself or where it forms a cusp are best understood in terms of complex numbers The full treatment uses techniques from algebra algebraic geometry complex analysis and topology and makes an attractive chapter of mathematics which can be used as an introduction to any of these topics or to singularity theory in higher dimensions This book is designed as an introduction for graduate students and draws on the author s experience of teaching MSc courses moreover by synthesising different perspectives he gives a novel view of the subject and a number of new results

Geometric Invariant Theory for Polarized Curves Gilberto Bini, Fabio Felici, Margarida Melo, Filippo Viviani, 2014-11-07 We investigate GIT quotients of polarized curves More specifically we study the GIT problem for the Hilbert and Chow schemes of curves of degree d and genus g in a projective space of dimension $d + g$ as d decreases with respect to g We prove that the first three values of d at which the GIT quotients change are given by $d = 2g + 2$ where $a = 2, 3, 5, 4$ We show that for $a = 4$ L Caporaso s results hold true for both Hilbert and Chow semistability If $3 \leq a$

Nonlinear Computational Geometry Ioannis Z. Emiris, Frank Sottile, Thorsten Theobald, 2009-10-28

An original motivation for algebraic geometry was to understand curves and surfaces in three dimensions Recent theoretical and technological advances in areas such as robotics computer vision computer aided geometric design and molecular biology together with the increased availability of computational resources have brought these original questions once more into the forefront of research One particular challenge is to combine applicable methods from algebraic geometry with proven techniques from piecewise linear computational geometry such as Voronoi diagrams and hyperplane arrangements to develop tools for treating curved objects These research efforts may be summarized under the term nonlinear computational geometry This volume grew out of an IMA workshop on Nonlinear Computational Geometry in May June 2007 organized by I Z Emiris R Goldman F Sottile T Theobald which gathered leading experts in this emerging field The research and expository articles in the volume are intended to provide an overview of nonlinear computational geometry Since the topic involves computational geometry algebraic geometry and geometric modeling the volume has contributions from all of these areas By addressing a broad range of issues from purely theoretical and algorithmic problems to implementation and practical applications this volume conveys the spirit of the IMA workshop
