Advanced Magnetic Nanostructures:

Advanced Magnetic Nanostructures D.J. Sellmyer, Ralph Skomski, 2006-07-02 Advanced magnetic nanostructures is an emerging field in magnetism and nanotechnology but the literature consists of a rich variety of original papers and parts of reviews and books whose scope is comparatively broad This calls for a book with specific emphasis on state of the art synthetic methods for fabricating characterizing and theoretically modeling new magnetic nanostructures This book is intended to provide a comprehensive overview of the present state of the field Leading researchers world wide have contributed a survey of their special ties to guide the reader through the exploding literature in nanomagnetic structures The focus is on deliberately structured nanomagnets It includes cluster assembled self organized and patterned thin films but excludes for example multilayered thin films We target both industrial and academic researchers in magnetism and related areas such as nanotechnology materials science and theoretical solid state physics

Handbook of Advanced Magnetic Materials Yi Liu, D.J. Sellmyer, Daisuke Shindo, 2008-11-23 In December 2002 the world's first commercial magnetic levitation super train went into operation in Shanghai The train is held just above the rails by magnetic levitation maglev and can travel at a speed of 400 km/hr completing the 30km journey from the city to the airport in minutes Now consumers are enjoying 50 GB hard drives compared to 0.5 GB hard drives ten years ago Achievements in magnetic materials research have made dreams of a few decades ago reality The objective of the four volume reference Handbook of Advanced Magnetic Materials is to provide a comprehensive review of recent progress in magnetic materials research Each chapter will have an introduction to give a clear definition of basic and important concepts of the topic The details of the topic are then elucidated theoretically and experimentally New ideas for further advancement are then discussed Sufficient references are also included for those who wish to read the original work In the last decade one of the most significant thrust areas of materials research has been nanostructured magnetic materials There are several critical sizes that control the behavior of a magnetic material and size effects become especially critical when dimensions approach a few nanometers where quantum phenomena appear The first volume of the book Nanostructured Advanced Magnetic Materials has therefore been devoted to the recent development of nanostructured magnetic materials emphasizing size effects Our understanding of magnetism has advanced with the establishment of the theory of atomic magnetic moments and itinerant magnetism Simulation is a powerful tool for exploration and explanation of properties of various magnetic materials Simulation also

high density information storage technologies Providing a unique source of information for the young physicist chemist or engineer the book also serves as a crucial reference for the expert scientist and the teacher of advanced university courses

Complex Magnetic Nanostructures Surender Kumar Sharma,2017-04-04 This book offers a detailed discussion of the complex magnetic behavior of magnetic nanosystems with its myriad of geometries e g core shell heterodimer and dumbbell and its different applications It provides a broad overview of the numerous current studies concerned with magnetic nanoparticles presenting key examples and an in depth examination of the cutting edge developments in this field This contributed volume shares the latest developments in nanomagnetism with a wide audience from upper undergraduate and graduate students to advanced specialists in both academia and industry The first three chapters serve as a primer to the more advanced content found later in the book making it an ideal introductory text for researchers starting in this field It provides a forum for the critical evaluation of many aspects of complex nanomagnetism that are at the forefront of nanoscience today

It also presents highlights from the extensive literature on the topic including the latest research in this field Magnetic Resonance of Semiconductors and Their Nanostructures Pavel G. Baranov,Hans Jürgen von Bardeleben,Fedor Jelezko,Jörg Wrachtrup,2017-03-20 This book explains different magnetic resonance MR techniques and uses different combinations of these techniques to analyze defects in semiconductors and nanostructures It also introduces novelties such as single defects MR and electron paramagnetic resonance based methods electron spin echo electrically detected magnetic resonance optically detected magnetic resonance and electron nuclear double resonance the designated tools for investigating the structural and spin properties of condensed systems living matter nanostructures and nanobiotechnology objects Further the authors address problems existing in semiconductor and nanotechnology sciences that can be resolved using MR and discuss past current and future applications of MR with a focus on advances in MR methods The book is intended for researchers in MR studies of semiconductors and nanostructures wanting a comprehensive review of what has been done in their own and related fields of study as well as future perspectives **Handbook of**
