Advanced Optoelectronic Technology Proceeding Spie Vol 864:

Advanced Optoelectronic Technology D. B. Ostrowsky, Claude Puech, 1988 **Novel Silicon Based Technologies** R.A. Levy, 2012-12-06 Silicon as an electronic substrate has sparked a technological revolution that has allowed the realization of very large scale integration VLSI of circuits on a chip These 6 fingernail sized chips currently carry more than 10 components consume low power cost a few dollars and are capable of performing data processing numerical computations and signal conditioning tasks at gigabit per second rates Silicon as a mechanical substrate promises to spark another technological revolution that will allow computer chips to come with the eyes ears and even hands needed for closed loop control systems The silicon VLSI process technology which has been perfected over three decades can now be extended towards the production of novel structures such as epitaxially grown optoelectronic GaAs devices buried layers for three dimensional integration micromechanical mechanisms integrated photonic circuits and artificial neural networks This book begins by addressing the processing of electronic and optoelectronic devices produced by using lattice mismatched epitaxial GaAs films on Si Two viable technologies are considered In one silicon is used as a passive substrate in order to take advantage of its favorable properties over bulk GaAs in the other GaAs and Si are combined on the same chip in order to develop IC configurations with improved performance and increased levels of integration The relationships between device operation and substrate quality are discussed in light of potential electronic and optoelectronic applications *Electrical & Electronics Abstracts* ,1995 **Nonlinear Surface Electromagnetic Phenomena** H.-E. Ponath, G.I. Stegeman, 2012-12-02 In recent years the physics of electromagnetic surface phenomena has developed rapidly evolving into technologies for communications and industry such as fiber and integrated optics The variety of phenomena based on electromagnetism at surfaces is rich and this book was written with the aim of summarizing the available knowledge in selected areas of the field The book contains reviews written by solid state and optical physicists on the nonlinear interaction of electromagnetic waves at and with surfaces and films Both the physical phenomena and some potential applications are dealt with Included are discussions of nonlinear wave mixing on films and surfaces second harmonic generation in waveguides and at surfaces nonlinear waves guided by dielectric and semiconductor surfaces and films surface gratings formed by high energy laser beams and reflection and transmission switching of strong beams onto nonlinear surfaces Chapters on light scattering from surface excitations and magnetic order disorder and orientational phase transitions complete this essential contribution to the modern optics literature 5th European Conference on Integrated Optics Michel R. Papuchon, Alain Carengo, D. B. Ostrowsky, 1989 *International Aerospace Abstracts* ,1998 **Miniaturized Systems with Micro-optics and Micromechanics** ,1998 Organic Nonlinear Optical Materials Ch. Bosshard, 2020-04-23 Organic Nonlinear Optical Materials provides an extensive description of the preparation and characterization of organic materials for applications in nonlinear and electro optics The book discusses the fundamental optimization and practical limitations of a number of figures

of merit for various optical parameters and gives a clinical appraisal of **Directory of Published Proceedings**, 1999

Guided Wave Nonlinear Optics D.B. Ostrowsky, R. Reinisch, 2012-12-06 The object of this school held at Cargese Corsica France from August 12th to 24th 1991 was the presentation of the field of guided wave nonlinear optics in a comprehensive coherent and heuristic fashion It seems appropriate that this school began with an historical introduction by Professor Nicolaas Bloembergen of Harvard the acknowledged father of nonlinear optics in general and concluded with a round table discussion headed by Dr Eric Spitz the Scientific Director of a multinational electronics company interested in developing industrial applications of guided wave nonlinear optics The lectures covered both the theoretical framework of the field and applications to basic scientific research optical communications and technical instrumentation Specific topics developed included materials for guided wave nonlinear optics nonlinear interactions using integrated optical guides nonlinear surface waves solitons fiber nonlinear optics ultra fast coupler switching as well as the related topic of fiber and integrated optical lasers and amplifiers Lectures have also been devoted to squeezed states chaos and strange attractors The subjects covered by the school underlines one of the major ways in which this field has evolved over the past thirty some odd years The path from the original experiments with materials requiring mega watt power lasers to the recent developments in guided wave configurations using milliwatt power diode lasers is marked by the conjunction of ever improving fundamental scientific comprehension and continuing technological developments Semiconductor Lasers II Siamak Forouhar, Guo jia zi ran ke xue ji jin wei yuan hui, 1996
