It begins with an overview of educational psychology emphasizing its scope, relevance, and application in today's educational settings. Subsequent chapters delve into various learning theories including classical and operant conditioning, constructivist models, and information processing approaches. The discussion of intelligence and creativity highlights different theories, assessment methods, and their implications for student potential and problem solving. Motivation is thoroughly examined through established theories like Maslow's hierarchy, self-determination, and expectancy-value models with practical strategies for enhancing learner engagement. The book also addresses personality and individual differences emphasizing emotional intelligence, learning styles, and differentiated instruction. Psychological assessment and evaluation are explored to equip readers with knowledge of standardized and non-standardized testing and their role in academic planning. Classroom management is covered through theory and practice with a focus on special needs and the importance of teacher-student relationships. The final chapter underscores the importance of mental health and well-being in education touching on stress management, mindfulness, and the supportive role of educators.
