Advanced Optical Processing Of Materials Proceedings:

Advanced Optical Processing of Materials Materials Research Society. Meeting, 2003 Since the inauguration of the MRS symposium series on advanced optical processing of materials back in 1990 the number of optical based techniques applied to process materials and the capabilities of optical systems has continued to expand and improve beyond simple pulsed laser deposition of thin films In turn the scope of materials being investigated has also increased from oxide ceramics to include alloys polymers and bio materials Many of the most exciting areas presented in this interdisciplinary forum include current and future applications in engineering materials at the mesoscopic to nanometer scale optoelectronics biomaterials sensors and electronics Advanced optical processing of materials now includes laser interactions with materials that are specially designed to optimize the beneficial qualities of laser modification However femtosecond processing of materials emerged as the dominant theme this year and several papers on this topic are featured Another hot topic is one connected with biomedical applications the controlled delivery of drugs to increase their efficacy by coating a fluidized bed of drug powders with biodegradable polymers was realized by conventional pulsed laser deposition PLD and matrix assisted pulsed laser evaporation MAPLE or by microencapsulation

IUTAM Symposium on Mesoscopic Dynamics of Fracture Process and Materials Strength H. Kitagawa, Y. Shibutani, 2013-11-11 This volume contains the papers presented at the IUT AM Symposium of Mesoscopic Dynamics of Fracture Process and Materials Strength held in July 2003 at the Hotel Osaka Sun Palace Osaka Japan The Symposium was proposed in 2001 aiming at organizing concentrated discussions on current understanding of fracture process and inhomogeneous deformation governing the materials strength with emphasis on the mesoscopic dynamics associated with evolutionary mechanical behaviour under micro macro mutual interaction The decision of the General Assembly of International Union of Theoretical and Applied Mechanics IUT AM to accept our proposal was well timed and attracted attention Driven by the development of new theoretical and computational techniques various novel challenges to investigate the mesoscopic dynamics have been actively done recently including large scaled 3D atomistic simulations discrete dislocation dynamics and other micro mesoscopic computational analyses The Symposium attracted sixty six participants from eight countries and forty two papers were presented The presentations comprised a wide variety of fundamental subjects of physics mechanical models computational strategies as well as engineering applications Among the subjects discussed are a dislocation patterning b crystal plasticity c characteristic fracture of amorphous nanocrystal d nano indentation e ductile brittle transition f ab initio calculation g computational methodology for multi scale analysis and others
