PHTLS 5th Edition Military Version is a unique continuing education program that directly addresses trauma issues in the prehospital environment. Following the publication cycle of ATLS Advanced Trauma Life Support by the Committee on Trauma of the American College of Surgeons, the PHTLS program is designed to enhance and increase knowledge and skill in delivering trauma care. The PHTLS textbook is the required book for the PHTLS course and is also ideal for use as the trauma component of a paramedic course or as a general reference book on trauma assessment and management. Based on Prehospital Trauma Life Support PHTLS 5th Edition, this military version combines both basic and advanced trauma concepts and skills in one definitive resource and features an entirely new chapter on evidence-based guidelines for military medicine developed by the Committee on Tactical Combat Casualty Care. Instructor resources are available; contact your sales representative for details. A companion CD-ROM with video presentations of the airway and spinal skills used in PHTLS is now included with every book. It also contains information to download onto a PDA such as the Glasgow Coma Scale, Revised Trauma Score, Rule of 9s, Parkland Formula, and Pediatric Vital Signs. Content includes both basic and advanced training and has been updated to reflect the current ATLS guidelines, complete with extensive references and suggested readings. A consistent approach for every body region makes the book easy to follow and includes content on anatomy and physiology, pathophysiology, and assessment and management. Includes chapters on Injury Prevention, Golden Principles of Prehospital Trauma Care, and Triage, Transport, and Trauma Systems. Golden Principles of Trauma Care chapter includes information on prolonged transportation and additional treatment for a trauma patient when transportation times are greater than normal. Case Scenarios with end-of-chapter solutions and Review Questions are included for every chapter to promote critical thinking and assess knowledge. NAEMT Airway, thoracic, and spinal skills are presented in a heavily illustrated, step-by-step format as Specific Skills. The Airway Management and Ventilation chapter includes information on face-to-face intubation, an alternate method of intubating trauma patients. It also defines the difference between pharmacologically assisted intubation and rapid sequence intubation. Includes information on tools such as pulse oximetry and capnography. A difficult airway algorithm aids students in determining which airway adjuncts are appropriate and when they should be used. Includes new photographs geared specifically to the military. Describes differences in procedures in a non-combat situation and those in a combat situation. The Military Medicine chapter, written by the military, provides special trauma considerations and protocols. Military procedures are also found throughout the text where applicable.

*PHTLS National Association of Emergency Medical Technicians (U.S.). Pre-Hospital Trauma Life Support Committee, 1999. The PREHOSPITAL TRAUMA LIFE SUPPORT PHTLS course is a unique continuing education program created from the real need in EMS education for additional training in the handling of trauma patients. The course and the book PREHOSPITAL TRAUMA LIFE SUPPORT educate EMS personnel to identify, stabilize, treat, and transport trauma patients with the highest level of care. Prehospital patients who are stabilized and then quickly transported to an appropriate medical facility have the best chance of survival. Identifying the mechanism of*

injury interpreting signs and symptoms understanding pathophysiology recognizing life threatening injuries and honing assessment skills all help the EMT to identify a trauma patient with multiple injuries and perform appropriate interventions PHTLS treats the trauma patient as a special entity with needs that differ from those of other patients Provides the most current information available through revised and updated chapters which adhere to the new 1998 ATLS guidelines Features comprehensive coverage for both basic and advanced level training Emphasizes the foundation of trauma care specifically understanding the mechanism of injury Includes in depth coverage of anatomy and physiology pathophysiology assessment and management of trauma to key body systems and regions Covers special patient populations including pediatrics geriatrics and pregnant patients to refresh the EMT regarding the importance of understanding the differences in physiology and presentation in these special populations Contains an entire chapter devoted to trauma care in the military because prehospital care in military situations is indisputably different than most civilian trauma situations Promotes clear practical understanding of the proper procedures for airway and spine skills with separate chapters that outline techniques and procedures with photos alongside text in a step by step format Includes chapter objectives summary and review questions to help the student self assess and pick out key points from the material Includes case scenarios and conclusions to promote critical thinking and allow the student to see real application of the concepts discussed in each chapter Provides a comprehensive glossary and bibliography to direct the reader when further study on a particular topic is desired Incorporates more than 300 full color illustrations many updated and enlarged from previous edition to aid in visual learning comprehension of material explanation of difficult concepts and keep reader s interest MGH Textbook of Emergency Medicine Earle W. Wilkins,1983
