Control: A Paradigm For Distributed Resource Allocation Scott H Clearwater, James J Yeh, 1996-01-11 Market Based Control is a paradigm for controlling complex systems that would otherwise be very difficult to control maintain or expand The purpose of this volume is to illustrate the utility of market based control through a series of papers focusing on different applications This volume for the first time brings together the research from a wide range of fields all using a market based conceptual framework The features of markets that have provided motivation for these works include decentralization interacting agents and some notion of a resource that needs to be allocated The papers span a range including theoretical considerations simulations and implementations Learning from Data Doug Fisher, Hans-J. Lenz, 2012-12-06 Ten years ago Bill Gale of AT T Bell Laboratories was primary organizer of the first Workshop on Artificial Intelligence and Statistics In the early days of the Workshop series it seemed clear that researchers in AI and statistics had common interests though with different emphases goals and vocabularies In learning and model selection for example a historical goal of AI to build autonomous agents probably contributed to a focus on parameter free learning systems which relied little on an external analyst s assumptions about the data This seemed at odds with statistical strategy which stemmed from a view that model selection methods were tools to augment not replace the abilities of a human analyst Thus statisticians have traditionally spent considerably more time exploiting prior information of the environment to model data and exploratory data analysis methods tailored to their assumptions In statistics special emphasis is placed on model checking making extensive use of residual analysis because all models are wrong but some are better than others It is increasingly recognized that AI researchers and or AI programs can exploit the same kind of statistical strategies to good effect Often AI researchers and statisticians emphasized different aspects of what in retrospect we might now regard as the same overriding tasks
