Fiechter,1981      Biomass Utilization Wilfred Cote,2013-12-01 This proceedings volume represents the culmination of nearly three years of planning organizing and carrying out of a NATO Advanced Study Institute on Biomass Utilization The effort was initiated by Dr Harry Sobel then Editor of Biosources Digest and a steering committee representing the many disciplines that this field brings together When the fiscal and logistical details of the original plan could not be worked out the idea was temporarily suspended In the spring of 1982 the Renewable Materials Institute of the State University of New York at the College of Environmental Science and Forestry in Syracuse New York revived the plan A number of modifications had to be made including the venue which was changed from the U S A to Portugal Additional funding beyond the basic support provided by the Scientific Affairs Division of NATO had to be obtained Ultimately there were supplementary grants from the Foundation for Microbiology and the Anne S Richardson Fund to assist student participants The New York State College of Forestry Foundation Inc provided major support through the Renewable Materials Institute The ASI was held in Alcabideche Portugal from September 26 to October 9 1982 Eighty participants including fifteen principal lecturers were assembled at the Hotel Sintra Estoril for the program that was organized as a comprehensive course on biomass utilization The main lectures were supplemented by relevant short papers offered by the participants      Advances in Biofeedstocks and Biofuels, Production Technologies for Biofuels Lalit Kumar Singh,Gaurav Chaudhary,2017-05-25 This second volume in the Advances in Biofeedstocks and Biofuels series focuses on the latest and most up to date technologies and processes involved in the production of biofuels Biofuels production is one of the most extensively studied fields in the energy sector that can provide an alternative energy source and bring the energy industry closer to sustainability Biomass based fuel production or renewable fuels are becoming increasingly important as a potential solution for man made climate change depleted oil reserves and the dangers involved with hydraulic fracturing or fracking The price of oil will always be volatile and changeable and as long as industry and private citizens around the world need energy there will be a need for alternative energy sources The area known as biofuels and biofeedstocks is one of the most important and quickly growing pieces of the energy pie Biofuels and biofeedstocks are constantly changing and new processes are constantly being created changed and improved upon The area is rapidly changing and always innovative It is important therefore that books like the volumes in this series are published and the information widely disseminated to keep the industry informed of the state of the art This second volume in the Advances in Biofeedstocks and Biofuels series focuses on the production of biofuel covering all of the major biofuels such as biodiesel biohydrogen bioethanol and others This engaging text touches on all of the most important new processes and technologies providing the most up to date coverage of the science available to industry It is a must have for any engineer or scientist working with biofuel technology      Microorganisms in Sustainable Agriculture and

Biotechnology Tulasi Satyanarayana, Bhavdish Narain Johri, Anil Prakash, 2012-01-03 This review of recent developments in our understanding of the role of microbes in sustainable agriculture and biotechnology covers a research area with enormous untapped potential. Chemical fertilizers, pesticides, herbicides, and other agricultural inputs derived from fossil fuels have increased agricultural production, yet growing awareness and concern over their adverse effects on soil productivity and environmental quality cannot be ignored. The high cost of these products, the difficulties of meeting demand for them, and their harmful environmental legacy have encouraged scientists to develop alternative strategies to raise productivity with microbes playing a central role in these efforts. One application is the use of soil microbes as bioinoculants for supplying nutrients and/or stimulating plant growth. Some rhizospheric microbes are known to synthesize plant growth promoters, siderophores, and antibiotics, as well as aiding phosphorus uptake. The last 40 years have seen rapid strides made in our appreciation of the diversity of environmental microbes and their possible benefits to sustainable agriculture and production. The advent of powerful new methodologies in microbial genetics, molecular biology, and biotechnology has only quickened the pace of developments. The vital part played by microbes in sustaining our planet's ecosystems only adds urgency to this enquiry. Culture-dependent microbes already contribute much to human life, yet the latent potential of vast numbers of uncultured and thus untouched microbes is enormous. Culture-independent metagenomic approaches employed in a variety of natural habitats have alerted us to the sheer diversity of these microbes and resulted in the characterization of novel genes and gene products. Several new antibiotics and biocatalysts have been discovered among environmental genomes, and some products have already been commercialized. Meanwhile, dozens of industrial products currently formulated in large quantities from petrochemicals, such as ethanol, butanol, organic acids, and amino acids, are equally obtainable through microbial fermentation. Edited by a trio of recognized authorities on the subject, this survey of a fast-moving field with so many benefits within reach will be required reading for all those investigating ways to harness the power of microorganisms in making both agriculture and biotechnology more sustainable.
