**Immobilized Biocatalysts** Winfried Hartmeier,2012-12-06

Biotechnological processes often require the use of immobilized biocatalysts This translation of the most successful German edition introduces the theoretical background of this rapidly growing field followed by a detailed description of the various techniques of immobilizing characterizing and using biocatalysts The comprehensive discussion of possible applications in industrial processes and in basic research results in a practical guide for everyone involved in these techniques Furthermore some selected experiments are added in order to facilitate the understanding of the theoretical reports

*Secondary Products from Plant Tissue Culture* Phytochemical Society of Europe,1990

Plants are superb synthesizers of organic compounds producing an extensive range of products from the simple building blocks of carbon dioxide water and inorganic ions These secondary products are widely used in commerce particularly the food and pharmaceutical industries Recent advances in the techniques of plant biotechnology and genetic engineering have increased the potential of plant cell cultures as an important source of these compounds Researchers are now beginning to understand the factors that control the expression and regulation of genes involved in the synthesis transport storage and metabolism of natural products This volume contains contributions from eminent researchers who provide an up to date review of current work in this field and detail the exciting advances now being made
