Progress in Biophysics and Molecular Biology J. A. V. Butler, D. Noble, 2014-05-18 Progress in Biophysics and Molecular Biology Volume 32 summarizes the significant progress that has been made in the fields of biophysics and molecular biology Topics range from metabolic regulation and transfer RNA to cellular metabolism and prokaryotic and eukaryotic ribosomes This volume consists of five chapters and begins with a discussion of mathematical models used in the study of metabolic regulation with emphasis on the energy metabolism of eukaryotes The next chapter examines the possible functions of transfer RNA minor components paying particular attention to the principle of location function relationships The reader is also introduced to spatial functional correlations in cellular metabolism and highlights the role of organized multienzyme systems along with the fundamentals of ribosome structure and function in prokaryotes and eukaryotes A chapter that analyzes the structures and functions of transfer RNA concludes the book This book will be of interest to scientists students and researchers working in the fields of biophysics and molecular biology [National Library of Medicine Current Catalog National Library of Medicine \(U.S.\)](#), 1988 **Progress in Biophysics and Biophysical Chemistry** J. A. V. Butler, H. E. Huxley, R. E. Zirkle, 2016-07-04 Progress in Biophysics and Biophysical Chemistry Volume 12 provides an overview of the state of knowledge in biophysics and biological chemistry The book begins with a study on cell division synchronization This is followed by separate chapters on the biology and function of the nucleolus the nature of ribosomes and their involvement in protein synthesis taste receptor stimulation and the various methods developed for quantitative estimation of the amount of dye deposited in a stained preparation as well as some of the associated theoretical and practical implications Subsequent chapters deal with the preparation fractionation physical properties analysis and functions of histones and the use of tritium labelled DNA precursors in autoradiography **Scientific and Technical Books in Print**, 1972 [Cellular Biophysics, Volume 2](#) Thomas Fischer Weiss, 1996-03-06 Cellular Biophysics is a quantitatively oriented basic physiology text for senior undergraduate and graduate students in bioengineering biophysics physiology and neuroscience programs It will also serve as a major reference work for biophysicists Developed from the author's notes for a course that he has taught at MIT for many years these books provide a clear and logical explanation of the foundations of cell biophysics teaching transport and the electrical properties of cells from a combined biological physical and engineering viewpoint Each volume contains introductory chapters that motivate the material and present it in a broad historical context Important experimental results and methods are described Theories are derived almost always from first principles so that students develop an understanding of not only the predictions of the theory but also its limitations Theoretical results are compared carefully with experimental findings and new results appear throughout There are many time tested exercises and problems as well as extensive lists of references The volume on the electrical properties of cells covers both electrically inexcitable cells as well as electrically excitable cells such as neurons and muscle cells Included are chapters on lumped

parameter and distributed parameter models of cells linear electric properties of cells the Hodgkin Huxley model of the giant axon of the squid saltatory conduction in myelinated nerve fibers and voltage gated ion channels **Catalog of Copyright Entries.
