Advances In Brain Vasopressin:

Advances in Brain Vasopressin I.J.A. Urban,J.P.H. Burbach,D. De Wied,1999-02-16 Advances in Brain Vasopressin elucidates the functions of the regulatory peptide vasopressin in the nervous system and reviews the current status of this field at different levels It deals with the cell biology and anatomy of the neurons that produce vasopressin in the brain and provides an overview on the receptors of vasopressin and the signal transduction pathways that they activate including the cellular responses that are triggered by vasopressin Reviews are presented on the modulation of behavior induced by vasopressin in a number of different contexts such as sex linked and steroid dependent behaviors social behaviors and learning and memory Furthermore the volume deals with several controversial issues in the field by presenting overlapping chapters from different research groups in order to provide the reader with current views Highly relevant and useful for those working on this first neuropeptide and for young investigators entering the field and in addition shows how important a multidisciplinary approach is to unravelling the function of a neuropeptide in the brain

Prablanc,D. Pélisson,Y. Rosetti,2003-02-28 Clinical neuropsychology has evolved by integrating in its field the knowledge derived from neuroanatomical electrophysiological and psychophysical data and has led to the development of rehabilitation tools This volume tries to link the new concepts and discoveries in the field of sensorimotor coordination It contains the main contributions of participants of an international symposium held in Lyon in 2001 entitled Neural control of space coding and action production The book emphasizes the reciprocal relationship between perception and action and the essential role of active sensorimotor organization or reorganization in building up perceptual and motor representations of the self and of the external world **Advances in Behavioral Biology** ,1971 *New Books in the Veterinary Medicine Library* Ohio State University. Libraries. Veterinary Medicine Library,1997 Evolutionary and Comparative Neuroendocrinology Valery Grinevich,Rui Oliveira,2025-05-10 This book delves into the intricate journey of

neuroendocrine evolution from its rudimentary origins in single celled organisms to the complex systems found in mammals. It offers a comprehensive exploration of how neuropeptides and their receptors have evolved, highlighting the pivotal role of the hypothalamus and pituitary gland in this process. Key concepts covered include the evolution of neuropeptide signaling, insights from invertebrate hypothalamic-pituitary systems, and the functional trajectories of ancient peptide ligand-receptor systems. The book addresses critical questions such as the organization and evolution of neurotransmitter volume transmission, the form and function of growth hormone-releasing hormone across vertebrates, and the co-evolution of neuroendocrine signaling dyads. Chapters on the melanocortin system, corticotropin-releasing hormone, and non-peptide regulation of social behavior in teleost fish provide a deep dive into specific pathways and their evolutionary significance. Aimed at researchers and professionals in neuroscience, endocrinology, and evolutionary biology, this text serves as an invaluable resource for anyone interested in the comparative anatomy and physiology of neuroendocrine systems. This is the seventeenth volume in the International Neuroendocrine Federation (INF) Masterclass in Neuroendocrinology series, which aims to illustrate the highest standards and highlight the latest technologies in basic and clinical research and aspires to provide inspiration for further exploration into the exciting field of neuroendocrinology.

Biologically Active Peptides in Invertebrates Qing Yu, Zhidan Liang, Chuanzi OuYang, Lingjun Li, 2015-10-01. Animal behaviors and emotions are fine-tuned via signal transmission and communication between cells. The nervous system gives instructions and transmits signals to different parts of an organism to produce coordinated activities. Neurons are core components of the nervous system and they use various chemical messengers to communicate with one another. Neuropeptides (NPs) which are small chains of amino acids represent the largest class of signaling molecules. Since NPs are directly involved in modulating many physiological processes such as metabolism, reproduction, learning, memory, and social behaviors, there is a growing interest in studying their structures, functions, and distributions. This book aims to summarize advances in invertebrate NP studies concerning molecular diversities, distributions, and biological functions. In addition, the emerging mass spectrometric techniques have been discussed extensively as a powerful tool enabling accelerated invertebrate NP studies.
