**Advances in Information Systems Science** Julius T. Tou,2012-01-19 Information systems science embraces a broad spectrum of topics It is virtually impossible to provide comprehensive and in depth discussion other than simple recitals of recent results of every important topic in each volume of this annual review series Since we have chosen the former approach each volume will only cover certain aspects of recent advances in this burgeoning field The emphasis in this volume the third of a continuing series is focussed upon pattern recognition pictorial information manipulation and new approaches to logical design of information networks In Chapter 1 V A Kovalevsky presents a tutorial survey of practical and theoretical developments in pattern recognition He categorizes the basic developments in three different directions The first direction is characterized by an empirical treatment with highly specialized recognition schemes In the second direction the major efforts are centered upon the creation of learning systems capable of improving recognition performance on the basis of past experience The majority of the work in the third direction is devoted to the study of the basic structure of complex patterns the construction of mathematical models for pattern recognition and the analysis of complex pictorial representations The author elucidates the heuristics approach and the science approach to pattern recognition problems This chapter together with Chapter 2 of this volume supplements the chapter on Engineering Principles of Pattern Recognition in Volume 1 to provide a more complete treatment of this subject      **Advances in Information Systems Science. Julius T. Tou,2012-12-06 Volume 9 of this series on information systems science presents four timely topics of current interest in this growing field In each chapter an attempt is made to familiarize the reader with some basic background information on the advances discussed so that this volume may be used independently or in conjunction with the previous volumes The emphasis in this volume is on data structures for scene analysis database management technology inductive inference in processing pattern based information and logic design of MOS networks Scene analysis has become a very important aspect in information system design The process of scene analysis involves sensing segmentation recognition and

interpretation Innovative development of algorithms for these tasks requires the utilization of structural relationship prevalent within the sensed data In Chapter 1 Thomason and Gonzalez discuss the formulation of data representation techniques and the properties of data structures and databases in scene analysis In view of the growing importance of database management Chapter 2 is devoted to an overview of database management technology In this chapter Kobayashi covers a variety of current topics The topics discussed include system design methodology data structure theory semantic considerations calculus based database operations database management functions and the issues of integrity security concurrency and recoverability This chapter also discusses the end user languages and several existing database management systems *Advances in Information Systems Science V.2* Julius T. Tou,2012-12-06 Information systems science is rapidly advancing in many directions Diversified ideas methodologies and techniques as well as applications have been conceived and developed This series intends to discuss some of the recent advances in this field In this volume we cover four timely topics which are of great current interest In each chapter an attempt is made to familiarize the reader with some basic background information on the advances discussed The emphasis of this volume is placed upon parallel programming data structure models in information system design and the principles of L systems One of the effective means to enhance computation performance is parallel information processing on multiprocessor systems In Chapter I V E Kotov discusses the practical aspects of parallel programming He is concerned with the languages and methods of parallel programming performance analysis and automatic synthesis of parallel programs In Chapter 2 A S Narin yani presents the formal theory of parallel computations These two chapters attempt to correlate and classify various methods in parallel programming thus providing the reader with a unified approach to this important subject matter Data structures play an important role in information system design
