**Insect Neurohormones** Marie Raabe, 2012-12-06 The discovery of insect neurohormones dates from the earliest experimental investigations in insect endocrines and the matter cannot be discussed without evoking the names of its pioneers Kopeck Wigglesworth Fraenkel Whereas the experiments demonstrated the existence of the first known neurohormones the formulation of the concept of neurosecretion was of fundamental importance to further progress and tribute must be paid to Ernst and Berta Scharrer The recent proliferation of investigations into insect neurohormones has created the need for an overall review of the data Our knowledge of the subject is voluminous and the evidence clearly demonstrates that neurohormones play a part in most insect regulatory processes This book analyzes and synthesizes the data starting from neurosecretion i.e. source sites and release modes of neurohormones and continuing through the various functions in which neurohormones have been shown to be involved endocrine gland activity diapause reproduction visceral muscle functioning color change behavior water and ion balance protein sugar and lipid metabolism and tanning and other processes occurring at the cuticle level In each chapter besides the experimental information technical procedures as well as recent information concerning purification of the particular neurohormones and their mode of action are reported Numerous exhaustive tables allow the reader to get an overview of the matter while the major findings of the moment are presented in the conclusion of each chapter
