Logic 15 Agata Ciabattoni, David Gabelaia, Igor Sedlár,2024-08-02 Since ancient times philosophers have recognised that truth comes in many modes so that a proposition can be not only true or false but also for example necessary or possible These ideas led to the modern field of modal logic a lively area of research at the interface of philosophy mathematics and computer science Nowadays the term modal logic is understood in a broad sense allowing it to encompass logics for reasoning about seemingly unrelated phenomena such as knowledge obligations time space and proofs among many others Contemporary research in modal logic draws on techniques from many disciplines including complexity theory combinatorics universal algebra category theory topology and proof theory These proceedings record the papers presented at Advances in Modal Logic 2024 the 15th in a series of biennial conferences that aim to report on important new developments in pure and

applied modal logic Topics in this issue include epistemic modal logic constructive and many valued modal logic unification algebraic and neighbourhood semantics proof theory and complexity of modal logics conditional and quantified modal logic

Advances in Modal Logic Lev Beklemishev,Stephane Demri,Andras Mate,2016-06-30 Logic deals with the fundamental notions of truth and falsity Modal logic arose from the philosophical study of modes of truth with the two most common modes being necessarily true and possibly true Research in modal logic now spans the spectrum from philosophy computer science and mathematics using techniques from relational structures universal algebra topology and proof theory These proceedings record the papers presented at the 2016 conference on Advances in Modal Logic a biennial conference series with an aim to report on important new developments in pure and applied modal logic As indicated above there are new developments in using modal logic to reason about obligations about programs about time about combinations of modal logics and even about negation itself
