Plasma Science National Research Council, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Plasma Science Committee, Plasma 2010 Committee, 2008-01-20 As part of its current physics decadal survey Physics 2010 the NRC was asked by the DOE NSF and NASA to carry out an assessment of and outlook for the broad field of plasma science and engineering over the next several years The study was to focus on progress in plasma research identify the most compelling new scientific opportunities evaluate prospects for broader application of plasmas and offer guidance to realize these opportunities The study paid particular attention to these last two points This demand side perspective provided a clear look at what plasma research can do to help achieve national goals of fusion energy economic competitiveness and nuclear weapons stockpile stewardship The report provides an examination of the broad themes that frame plasma research low temperature plasma science and engineering plasma physics at high energy density plasma science of magnetic fusion space and astrophysical science and basic plasma science Within those themes the report offers a bold vision for future developments in plasma science *Advanced Space Plasma Physics* Rudolf A. Treumann, Wolfgang Baumjohann, 1997 This

book builds on the fluid and kinetic theory of equilibria and waves presented in a companion textbook Basic Space Plasma Physics by the same authors but can also serve as a stand alone text It extends the field covered there into the domain of plasma instability and nonlinear theory The book provides a representative selection of the many possible macro and microinstabilities in a space plasma from the Rayleigh Taylor and Kelvin Helmholtz to electrostatic and electromagnetic kinetic instabilities Their quasilinear stabilization and nonlinear evolution and their application to space physics problems are treated The chapters on nonlinear theory include nonlinear waves weak turbulence and strong turbulence all presented from the viewpoint of their relevance to space plasma physics Special topics include auroral particle acceleration soliton formation and caviton collapse anomalous transport and the theory of collisionless shocks *Advances in Space Plasma Physics* B. Buti, 1985
