Advances in Polymer Friction and Wear Lieng-Huang Lee, 2013-03-09 Polymers and polymer composites have been increasingly used in place of metals for various industries, namely aerospace, automotive, bio-medical, computer, electrophotography, fiber, and rubber tire. Thus an understanding of the interactions between polymers and between a polymer and a rigid counterface can enhance the applications of polymers under various environments. In meeting this need, polymer tribology has evolved to deal with friction, lubrication, and wear of polymeric materials and to answer some of the problems related to polymer-polymer interactions or polymer-rigid body interactions. The purpose of this first International Symposium was to introduce advances in studies of polymer friction and wear, especially in Britain and the U.S.S.R. Most earlier studies of the Fifties were stimulated by the growth of rubber tire industries. Continuous research through the Sixties has broadened the base to include other polymers.

such as nylon polyolefins and poly tetra fluoroethylene or PTFE However much of this work was published in engineering or physics journals and rarely in chemistry journals presumably the latter have always considered the work to be too applied or too irrelevant Not until recent years have chemists started to discover words such as tribo chemistry or mechano chemistry and gradually become aware of an indispensable role in this field of polymer tribology Thus we were hoping to bring the technology up to date during this SympOSium especially to the majority of participants polymer chemists by training

Applied Mechanics Reviews, 1993 NanoBioEngineering Bhupinder Singh, 2018-11-02 The objective of this book is to provide the fundamental comprehension of a broad range of topics in an integrated volume such that readership hailing from diverse disciplines can rapidly acquire the necessary background for applying it in pertinent research and development field Smart Hydrogel Modelling Hua Li, 2010-01-26 The science of mathematical modelling and numerical simulation is generally accepted as the third mode of scientific discovery with the other two modes being experiment and analysis making this field an integral component of cutting edge scientific and industrial research in most domains This is especially so in advanced biomaterials such as polymeric hydrogels responsive to biostimuli for a wide range of potential BioMEMS applications where multiphysics and multiphase are common requirements These environmental stimuli responsive hydrogels are often known as smart hydrogels In the published studies on the smart or stimulus responsive hydrogels the literature search clearly indicates that the vast majority are experimental based In particular although there are a few published books on the smart hydrogels none is involved in the modelling of smart hydrogels For the few published journal papers that conducted mathematical modelling and numerical simulation results were far from satisfactory and showed significant discrepancies when compared with existing experimental data This has resulted in ad hoc studies of these hydrogel materials mainly conducted by trial and error This is a very time consuming and inefficient process and certain aspects of fundamental knowledge are often missed or overlooked resulting in off tangent research directions **Microstructure and Microtribology of Polymer Surfaces** Vladimir Vasil'evich Titukruk, 2000 Presents 30 of the 62 papers delivered at an August 1998 international symposium in Boston on the tribology of polymeric materials at both the macroscopic and microscopic scales They look at some problems that have arisen as the equipment and experimental techniques for microscopic analysis have outdistanced the ability of scientists to model and interpret the results The overall themes are contact mechanics of polymeric materials micromechanics and microtribology surface microstructures of various polymers and industrial applications Among the specific topics are the role of interfacial slippage in adhesive release the experimental study of the friction regimes on viscoelastic materials sparse coatings by the dispersed adsorption of cylindrical brushes and the effect of surface texture on the friction of automotive interior plastics Annotation copyrighted by Book News Inc Portland OR MXenes for Sustainable Development Virat Khanna, Rashmi Walvekar, 2025-10-23 This book serves as a detailed guide to MXenes and their diverse applications in various domains helping to achieve sustainable development It begins with a
